## EEID - Electronic Single Phase <br> Independent Drive

## Features

- Independent control of fan speed. Infinitely variable from max to min with off position
- Supply 230 VAC, $50 / 60 \mathrm{~Hz}, 1$ Phase
- IP54 Surface \& IP44 Inset ingress protection rating
- Two \& Three wire control
- Clear indication light
- Commissioning adjustable minimum speed pre-set to $20 \%$ via internal potentiometer
- Fuse $5^{*} 20 \mathrm{~mm}$, spare included
- RAL9010 white ivory enclosure and face. Internal polyamide.
- Max ambient temperature: $50^{\circ} \mathrm{C}$

## Description

The compact units of the EEID series control the speed of single phase voltage controllable motors ( $230 \mathrm{VAC}, 50 / 60 \mathrm{~Hz}$ ) by varying the supplied voltage via optotriac phase angle control.

An LED indicates operational status with the hand controlled dial providing infinitely variable and off positioning.
Suitable for inset or surface mounting with the splash-resistant housing provided.

A safety isolator/switch disconnector should be installed on the mains side of all motor drives;

## Range

For selection of the drive current rating choose a controller model with a current rating equal to or above the fan full load current (FLC). If the motor is fitted with thermostat (Tk) overheat protection we recommend the EEDS controller range to enable this function.

## Wiring Diagram

| MODEL | EEID1A | EEID2A | EEID4A |
| :--- | :--- | :--- | :--- |
| PART | EA900100 | EA900101 | EA900102 |
| CURRENT RATING (A) | $0.1-1.0$ | $0.2-2$ | $0.4-4$ |
| FUSE (A) 5*20MM | F1.25A H | F2.5A H | F5.0A H |
| INGRESS PROTECTION | IP44/54 | IP44/54 | IP54* |

*Surface mount only

1 - Power supply 230 VAC, 50 Hz
2-230 VAC non-regulated output for connecting valve, dampers or three wire motor connection
N-Neutral
3 - Regulated output to motor
4 - Fuse holder with spare
5 - Minimum speed adjustment trimmer (pre-set to $20 \%$ )
6 - Control light

## Dimensions \& Weights

| MODEL | EEID1A | EEID2A | EEID4A |
| :--- | :--- | :--- | :--- |
| PART | EA900100 | EA900101 | EA900102 |
| NET WEIGHT (G) | 210 | 215 | 300 |
| GROSS WEIGHT $(G)$ | 235 | 240 | 325 |

## Mounting Instructions

EEID electronic fan speed controller for single phase voltage controllable motors.

Inset mounting (IP 44)
Break (Isolate) mains voltage. Connect according to diagram. Mount inner case to the wall with connections pointing down. Turn on mains voltage and controller. Adjust min. speed with insulated screwdriver and turn off controller. Mount cover with nut to the wall. Push knob in place at off position.

Surface mounting (IP 54)
Break (Isolate) mains voltage. Mount surface mounting case to the wall together with included grommets. Connect according to diagram. Turn on mains voltage and controller. Adjust min. speed with insulated screwdriver and turn off controller. Mount cover with nut to surface mounting case. Push knob in place at off position.

Adjustment
Trimmer (MIN) - Adjust with insulated screwdriver so that the motor does not stop due to variations of mains voltage and that it restarts after power failure.

Wiring (see previous page)
A safety isolator/switch disconnector should be installed on the mains side of all motor drives; refer to SISO.

We recommend three wire control for increased speed stability and low speed starting.

Change of fuse
Break (Isolate) mains voltage. Undo knob by first turning the knob to the right beyond end stop and then pull. Remove the nut. Remove fuse holder with a screwdriver. Change fuse. Put the details back in place. Use only recommended fuses (Approved, fast, with high breaking capacity).

Motor protection
If motors are fitted with thermostat (Tk) overheat protection it is recommended to use the EEDS range to utilise this feature.

Warranty
Two years from delivery date against defects in manufacturing. Any modifications or alterations to the product relieve the manufacturer of all responsibility. The manufacturer bears no responsibility for any misprints or mistakes in this data, and modifications or improvements to the product can be made at any time after date of publication.

## Maintenance

In normal conditions the controllers are maintenance-free. If soiled clean with dry or damp cloth. In case of heavy pollution clean with a non-aggressive product. In these circumstances the controller should be disconnected from the mains. Pay attention that no fluids enter the controller. Only reconnect the controller to the mains when it is completely dry.

General danger

Electrical hazard

All works may only be carried out by skilled personnel following the local regulations and AFTER the controller is completely separated from the mains. Replace fuse only with same type and rating.

# EEDS - Electronic Single Phase <br> Demand Switched Drive 

## Features

- Switched control of fan speed. Infinitely variable from max to min with on/off switch
- Supply: $230 \mathrm{VAC}, 50 / 60 \mathrm{~Hz}, 1$ Phase
- IP 54 ingress protection
- In built motor overheat protection via motor thermostats (Tk)
- BMS enable/disable (Fault via Tk)
- Two \& Three wire control
- Switched input / startup to front dial setting/ kick start: 6-7 sec. full speed
- Minimum and maximum speed setting trimmers
- Plastic enclosure (R-ABS, UL94-V0, grey RAL 7035), IP 54
- Max ambient temperature: $50^{\circ} \mathrm{C}$

## Description

The electronic speed controllers of the EEDS series control the speed of single phase voltage controllable motors ( $230 \mathrm{VAC}, 50 / 60 \mathrm{~Hz}$ ) by varying the supplied voltage.

The controller has connections for motors equipped with thermostat (Tk) overheat protection (NC-contact). When overheating is detected power to the motor is stopped. The red indicator light and alarm output will signal this error condition (reset: main switch to off position and back).

The working principle of this product series is based on zero crossing detection. An optotriac combined with a microprocessor ensures flawless and accurate control.

OC (open contact - normal mode) and CC (closed contact - normal mode) inputs are provided for remote starting and stopping via thermostats, PIR and/or frost protection, etc.

There is a potentiometer and a separate on/off switch with built-in illumination. The terminal board has a supplementary connection to branch off non-controlled 230 V .

A safety isolator/switch disconnector should be installed on the mains side of all motor drives; refer to SISO.

## Range

For selection of the drive current rating choose a controller model with a current rating equal to or above the fan full load current (FLC). If the motor is fitted with thermostat (Tk) overheat protection we recommend the EEDS controller range to enable this function.

| MODEL | EEDS3A | EEDS6A | EEDS1OA |
| :--- | :--- | :--- | :--- |
| PART | EA900103 | EA900104 | EA900105 |
| CURRENT RATING (A) | $0.1-3.0$ | $0.5-6.0$ | $0.5-10.0$ |
| FUSE (A) 5*20MM | F5 A-H | F8 A-H | F14 A-H (6X32) |
| INGRESS PROTECTION | IP54 | IP54 | IP54 |

## Wiring Diagram

L-N - Power supply 230 VAC, 50 Hz , 1 Phase
Pe - Power earth
L1-N - 230 VAC non-controlled outputs
OC - Normal open contact, thermostat, timer, frost protection, PIR, BMS remote on/off
CC - Normal closed contact (inverse logical)
N-AL - Alarm output in case of motor fault 230 VAC, 0,6 A (150 W)
TK - Connection for motor thermostat over heat protection. Can be used for BMS fault.
M-N - Motor connection
Min. speed - from 70 to 150 V - Pre-set 20\%
Max. speed - from 170 to 230 V - Pre-set $100 \%$

## Dimensions \& Weights

| MODEL | A | B | C | D | E | Net g | Gross g |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| EEDS3A | 83 | 160 | 66 | 71 | 108 | 420 | 440 |
| EEDS6A | 113 | 178 | 92 | 102 | 140 | 675 | 765 |
| EEDS10A | 113 | 178 | 92 | 102 | 140 | 650 | 740 |

## Mounting Instructions

Speed controller for voltage controllable single phase motors
Mounting
Break (Isolate) mains voltage. The controllers are to be mounted on a smooth surface. Connect voltage supply, motor(s) and earth as shown in the wiring diagram with cables of the proper diameter.

1. Break (Isolate) mains voltage \& be sure that the controller is in OFF position.
2. Take off the box cover by loosening the four screws. Note that the potentiometer is connected to the PCB with two wires.
3. Connect mains, motor(s) and earth cables of the proper diameter to the terminals according to the wiring diagram.
4. Start the controller and with insulated screwdriver adjust the minimum speed: with the potentiometer at minimum, adjust the trimmer so that the motor continues running or restarts smoothly in case of power faults. The minimum speed is factory pre-set at $20 \%$ speed.
5. Close the box and verify the installation.
6. When reconnecting mains voltage if the green LED is flashing the connector for the external trimmer is unplugged.

Wiring (see previous page)
If TK-TK is not operational: Link TK-TK
A safety isolator/switch disconnector should be installed on the mains side of the drive; refer to SISO.

We recommend three wire control for increased speed stability and low speed starting.

Transport and stock keeping
Avoid shocks. Store in original packing. Avoid extreme conditions.
Warranty
Two years from delivery date against defects in manufacturing. Any modifications or alterations to the product relieve the manufacturer of all responsibility. The manufacturer bears no responsibility for any misprints or mistakes in this data, and modifications or improvements to the product can be made at any time after date of publication.

Maintenance
In normal conditions the controllers are maintenance-free. If soiled clean with dry or damp cloth. In case of heavy pollution clean with a non-aggressive product. In ALL circumstances
the controller should be disconnected from the mains. Pay attention that no fluids enter the controller. Only reconnect the controller to the mains when it is completely dry.

Motor protection
For use with motors fitted with thermostat (Tk) (NC contact) overheat protection.

All works may only be carried out by skilled personnel following the local regulations and AFTER the controller is completely separated from the mains. Replace fuse only with same type and rating.

# EEDP - Electronic Single Phase <br> Demand Proportional Drive 

## Features

- Proportional control of fan speed via 0-10VDC control signal with on/off switch
- Supply: 230 VAC, $50 / 60 \mathrm{~Hz}, 1$ Phase
- IP54 ingress protection
- In built motor overheat protection via motor thermostat (Tk). Can be used for BMS fault.
- Two \& Three wire control
- BMS enable/disable (Fault via Tk)
- Control signal input: 0-10 VDC Supply: 12 VDC e.g. $\mathrm{CO}_{2}$, pressure and temperature sensor
- Minimum and maximum speed setting trimmers
- Plastic enclosure (R-ABS, UL94-V0, grey RAL 7035), IP 54
- Max ambient temperature: $50^{\circ} \mathrm{C}$

## Description

The EEDP automatically controls the speed of single phase ( 230 VAC , $50 / 60 \mathrm{~Hz}$ ) voltage controllable electric motor with a $0-10 \mathrm{VDC}$ or $0-20$ mA control signal. It is possible to invert the control signal to $10-0 \mathrm{VDC}$, $20-0 \mathrm{~mA}$.

An illuminated external power switch is provided.
A supplementary terminal block is provided to branch off 230 VAC noncontrolled for 3-wire motor connection or damper operation.

The working principle of this product series is based on zero crossing detection. An optotriac combined with a microprocessor ensures flawless and accurate control.

A kick star feature is selectable internally to start the motor for 10 sec at maximum speed.

The EEDP controllers have inbuilt connections for thermostat (Tk) motor protection (NC-contact). When the motor thermostats open, because of motor overheating, the circuit is broken and the controller stops power to the motor. After eliminating the cause of overheating the fan can be restarted by turning off the controller for a few moments.

A safety isolator/switch disconnector should be installed on the mains side of all motor drives; refer to SISO.

## Range

For selection of the correctly current rated drive select the model with a current rating equal to or above the fan full load current (FLC).

| MODEL | EEDP3A | EEDP6A | EEDP1OA |
| :--- | :--- | :--- | :--- |
| Part | EA900106 | EA900107 | EA900108 |
| Current rating (A) | $0.1-3.0$ | $0.5-6.0$ | $0.5-10.0$ |
| Fuse (A) 5*20mm | F5 A-H | F10. A-H | F16 A-H (6x32) |
| Ingress Protection | IP54 | IP54 | IP54 |

## Wiring Diagram

Calculation formula
$V$ out $=((V$ in $/ 10) *(V$ max- $-V$ min $))+V$ min $\quad V$ out $=(((V$ in-OFF-level $) /(10-O F F-l e v e l)) *(V$ max- $V$ min $))+V$ min

M

L - Mains supply 230 VAC, 50 Hz
N - Neutral
L1-230 VAC unregulated output (Imax 2 A)
Earth - Terminal (only for 3, 6 \& 10 A)
M - Regulated output to motor
TK - Connections for motor thermostat (Tk) overheat protection. Can be used for BMS fault.
N AL - Alarm output 230 VAC, 1 A
Sw - Switch BMS enable/disable (Fault via Tk)
GND - Control Ground
UI - Control signal 0-10 VDC (input impedance 90 kOhm )
I - 0-20 mA (input impedance 250 Ohm )
+V - Low voltage power supply: $12 \mathrm{VDC}, 1 \mathrm{~mA}$ for external potentiometer
Sw1 - Switch down $=0-10 \mathrm{~V}$, up $=10-0 \mathrm{~V}$
Sw2 - Switch down = disable off-level, up = enable off-level
Sw3 - Switch down = disable kick-start, up = enable kick-start
Sw4 - Switch down $=0-20 \mathrm{~mA}$, up $=0-10 \mathrm{~V}$ (select current/voltage)
PT1 - Max. speed adjustment trimmer, range: $165-230 \mathrm{~V}$
PT2 - Min. speed adjustment trimmer, range: $60-160 \mathrm{~V}$
PT3 - Off-level adjustment trimmer: 0-4 V or 10-6 V (depending on Sw1)
LED green: Normal operation. blinking: standby (input signal < off level).
red: motor overheated (reset device by turning off and on again)

## Dimensions \& Weights

| MODEL | A | B | C | D | E | Net g | Gross g |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| EEDP3A | 113 | 178 | 92 | 102 | 140 | 700 | 815 |
| EEDP6A | 113 | 178 | 92 | 102 | 140 | 860 | 975 |
| EEDP10A | 113 | 178 | 92 | 102 | 140 | 860 | 975 |

## Mounting Instructions

Speed controller for single phase voltage controllable motors.

## Mounting

Break (Isolate) mains voltage. The controllers are to be mounted on a smooth surface. Connect voltage supply, motor(s) and earth as shown in the scheme with cables of the proper diameter.

Wiring (see diagram on previous page)
If TK-TK is not operational: Link TK-TK
A safety isolator/switch disconnector should be installed on the mains side of the drive; refer to SISO.

We recommend three wire control for increased speed stability and low speed starting.

Transport and stock keeping
Avoid shocks. Stock in original packing. Avoid extreme conditions.

Motor protection
Connections provided for motors with thermostat (Tk) overheat protection (NC contacts).

## Warranty

Two years from delivery date against defects in manufacturing. Any modifications or alterations to the product relieve the manufacturer of all responsibility. The manufacturer bears no responsibility for any misprints or mistakes in this data, and modifications or improvements to the product can be made at any time after date of publication.

## Maintenance

In normal conditions the controllers are maintenance-free. If soiled clean with dry or damp cloth. In case of heavy pollution clean with a non-aggressive product. In these circumstances
the controller should be disconnected from the mains. Pay attention that no fluids enter the controller. Only reconnect the controller to the mains when it is completely dry.

All works may only be carried out by skilled personnel following the local regulations and AFTER the controller is completely separated from the mains. Replace fuse only with same type and rating.

## ME - Electronic Single Phase

## Features

- Classic control of fan speed. Infinitely variable with illuminated on/off switch
- Supply: 230 VAC, $50 / 60 \mathrm{~Hz}, 1$ Phase
- IP44 ingress protection
- Three wire control
- Infinitely variable voltage controller
- Max ambient temperature: $50^{\circ} \mathrm{C}$

## Description

The Classic ME series of drives provide speed control of single phase, 230 VAC, $50 / 60 \mathrm{~Hz}$ voltage controllable electric motors.

Available in 1, 3, 6 and 12 Amp units they have an illuminated on/ off switch and infinitely variable control to minimum and maximum speeds.

A safety isolator/switch disconnector should be installed on the mains side of all motor drives; refer to SISO.

## Range

For selection of the correctly current rated drive select the model with a current rating equal to or above the fan full load current (FLC).

| Model | ME1.1 | ME1.3 | ME1.6 | ME1.12 |
| :--- | :--- | :--- | :--- | :--- |
| Part | 410289 | 410290 | 410291 | 414855 |
| Current rating (A) | 1 | 3 | 6 | 12 |
| Ingress Protection | $\mathbb{P 4 4}$ | $\mathbb{P P 4 4}$ | $\mathbb{P 4 4}$ | $\mathbb{P} 44$ |

Wiring Diagram

CD2249

* Add link between terminal UZ and $K$ if three wire control is required.

## Dimensions \& Weights

A safety isolator/switch disconnector should be installed on the mains side of the drive; refer to SISO.

We recommend three wire control for increased speed stability and low speed starting.

Motor protection
If motors are fitted with thermostat (Tk) overheat protection it is recommended to use the EEDS range to utilise this feature.

Transport and stock keeping
Avoid shocks. Stock in original packing. Avoid extreme conditions.
Warranty
Two years from delivery date against defects in manufacturing. Any modifications or alterations to the product relieve the manufacturer of all responsibility. The manufacturer bears no responsibility for any misprints or mistakes in this data, and modifications or improvements to the product can be made at any time after date of publication.

## Maintenance

In normal conditions the controllers are maintenance-free. If soiled clean with dry or damp cloth. In case of heavy pollution clean with a non-aggressive product. In these circumstances the controller should be disconnected from the mains. Pay attention that no fluids enter the controller. Only reconnect the controller to the mains when it is completely dry.

All works may only be carried out by skilled personnel following the local regulations and AFTER the controller is completely separated from the mains. Replace fuse only with same type and rating.

## Transformer Speed Controllers \& Drives - Single Phase TEID - Transformer Single Phase <br> Independent Drive

## Features

- Independent transformer 5 step speed control for fans with off position
- Supply: 230 VAC, $50 / 60 \mathrm{~Hz}, 1$ Phase
- IP54 ingress protection
- Switch: 5 positions with offposition
- Indicator light
- Current fuse
- 230 VAC unregulated output
- Ready mounted cable glands
- Enclosure: plastic (R-ABS, UL94-V0, grey RAL 7035) or sheet steel (RAL 7035)
- Max ambient temperature: $50^{\circ} \mathrm{C}$

## Description

The TEID transformer speed controllers are based on the principle of voltage control with autotransformers. They are applicable to single phase voltage controllable motors $(230 \mathrm{~V}, 50 / 60 \mathrm{~Hz})$ to control the rotational speed of fans in five steps.

A safety isolator/switch disconnector should be installed on the mains side of all motor drives; refer to SISO.

## Range

For selection of the correctly current rated drive select the model with a current rating equal to or above the fan full load current (FLC).

| Model | TEID1A | TEID1.5A | TEID2.2A | TEID3.5A | TEID5A | TEID7.5A | TEID13A |

## Mounting Instructions

Speed controller for single phase voltage controllable motors.

## Mounting

Break (Isolate) mains voltage. The controllers are to be mounted on a smooth surface. Connect voltage supply, motor(s) and earth as shown in the scheme with cables of the proper diameter.

Wiring (Refer to diagram previously shown)
A safety isolator/switch disconnector should be installed on the mains side of all motor drives; refer to SISO.

Motor protection
If motors are fitted with thermostat (Tk) overheat protection it is recommended to use the TEDS range to utilise this feature.

Transport and stock keeping
Avoid shocks and extreme conditions. Stock in original packing.
Warranty
Two years from delivery date against defects in manufacturing. Any modifications or alterations to the product relieve the manufacturer of all responsibility. The manufacturer bears no responsibility for any misprints or mistakes in this data, and modifications or improvements to the product can be made at any time after date of publication.

## Maintenance

In normal conditions the controllers are maintenance-free. If soiled clean with dry or damp cloth. In case of heavy pollution clean with a non-aggressive product. In these circumstances
the controller should be disconnected from the mains. Pay attention that no fluids enter the controller. Only reconnect the controller to the mains when it is completely dry.

All works may only be carried out by skilled personnel following the local regulations and AFTER the controller is completely separated from the mains. Replace fuse only with same type and rating.

# TEDS - Transformer Single Phase <br> Demand Switched Drive 

## Features

- Switched control of fan speed. Five steps with off position
- Supply: 230 VAC, $50 / 60 \mathrm{~Hz}, 1$ Phase
- IP54 ingress protection
- In built motor overheat protection via motor thermostats (Tk). Can be used for BMS fault.
- Switch: 5 positions with offposition
- BMS enable/disable (BMS fault via Tk)
- Indicator lights, on/fault
- Current fuse
- Auto reset after supply failure
- Run/stop contacts (CC - normally closed, CO - normally open, for thermostat/frost protection, PIR, BMS Enable/Disable)
- Ready mounted cable glands
- Enclosure: plastic (R-ABS, UL94-V0, RAL 7035); steel (RAL 7035, polyester powder coating)
- Maximum ambient temperature: $50^{\circ} \mathrm{C}$

## Description

The TEDS transformer speed controllers are based on the principle of voltage control with auto-transformers. They are applicable to single phase voltage-controllable motors ( $230 \mathrm{VAC}, 50 / 60 \mathrm{~Hz}$ ) to control the rotational speed of fans in five steps.

They are fitted with contacts for motor thermostat (Tk) overheat protection (NC contacts). OC and CC inputs are provided for remote starting and stopping via thermostats, PIR and/or frost protection, etc.

A safety isolator/switch disconnector should be installed on the mains side of all motor drives; refer to SISO.

## Range

For selection of the correctly current rated drive select the model with a current rating equal to or above the fan full load current (FLC).

| Model | TEDS1.5A | TEDS2.5A | TEDS3.5A | TEDS5A | TEDS7.5A | TEDS13A |

## Mounting Instructions

Speed controller for single phase voltage controllable motors.

## Mounting

Break (Isolate) mains voltage. The controllers are to be mounted on a smooth surface. Connect voltage supply, motor(s) and earth as shown in the scheme with cables of the proper diameter.

Wiring (see diagrams)
If TK-TK is not operational: Link TK-TK
A safety isolator/switch disconnector should be installed on the mains side of all motor drives; refer to SISO.

Transport and stock keeping
Avoid shocks. Stock in original packing. Avoid extreme conditions.
Warranty
Two years from delivery date against defects in manufacturing. Any modifications or alterations to the product relieve the manufacturer of all responsibility. The manufacturer bears no responsibility for any misprints or mistakes in this data, and modifications or improvements to the product can be made at any time after date of publication.

Maintenance
In normal conditions the controllers are maintenance-free. If soiled clean with dry or damp cloth. In case of heavy pollution clean with a non-aggressive product. In these circumstances
the controller should be disconnected from the mains. Pay attention that no fluids enter the controller. Only reconnect the controller to the mains when it is completely dry.

Motor protection
The TEDS are fitted with contacts for motor thermostat (Tk) overheat protection. When motor contacts open due to motors overheating, the circuit is broken and the controller stops the power to the motor. Reset by putting the switch in the "Off"position.

All works may only be carried out by skilled personnel following the local regulations and AFTER the controller is completely separated from the mains. Replace fuse only with same type and rating.

# TEDSD - Transformer Single Phase <br> Demand Switched Dual Speed Drive 

## Features

- Switched control of fan speed between two speeds. Five steps with off position
- Supply: $230 \mathrm{VAC}, 50 / 60 \mathrm{~Hz}, 1$ Phase
- IP54 ingress protection
- In built motor overheat protection via motor thermostats (Tk). Can be used for BMS fault
- Switch: 5 positions with offposition \& low/high
- BMS enable/disable
- Indicator light
- Run/stop contacts (CC - normally closed, OC -normally open) for PIR, thermostat etc.
- Enclosure: sheet steel (RAL 7035) / plastic (R-ABS, UL94-V0, RAL 7035)
- Maximum ambient temperature: $50^{\circ} \mathrm{C}$

## Description

The TEDSD transformer speed controllers are based on the principle of voltage control with auto-transformers. They are applicable to voltagecontrollable single phase motors ( $230 \mathrm{VAC}, 50 / 60 \mathrm{~Hz}$ ) to control the rotational speed of fans.

The TEDSD makes it possible to select two optimal motor speeds and to switch between these with a contact. Important energy savings and an increase of comfort can be realised e.g. through day/night, PIR, thermostat control.

The control is fitted with contacts for motor thermostat (Tk) overheat protection. Run/stop contacts (CC-closed/OC-open) for external or remote starting/stopping are also provided.

A safety isolator/switch disconnector should be installed on the mains side of all motor drive; refer to SISO.

## Range

For selection of the correctly current rated drive select the model with a current rating equal to or above the fan full load current (FLC).

| Model | TEDSD1.5A | TEDSD2.5A | TEDSD3.5A | TEDSD5A | TEDSD7.5A | TEDSD13A |

In normal conditions the controllers are maintenance-free. If soiled clean with dry or damp cloth. In case of heavy pollution clean with a non-aggressive product. In these circumstances the controller should be disconnected from the mains. Pay attention that no fluids enter the controller. Only reconnect the controller to the mains when it is completely dry.

Motor protection
The TEDS are fitted with contacts for motor thermostat (Tk) overheat protection. When motor contacts open due to motors overheating, the circuit is broken and the controller stops the power to the motor. Reset by putting the switch in the "Off"postion.

All works may only be carried out by skilled personnel following the local regulations and AFTER the controller is completely separated from the mains. Replace fuse only with same type and rating.

# TEDP - Transformer Single Phase <br> Demand Proportional Drive 

## Features

- Proportional 5 step control of fan speed via 0-10VDC control signal
- Supply: 230 VAC, $50 / 60 \mathrm{~Hz}, 1$ Phase
- IP54 ingress protection
- In built motor overheat protection via motor thermostats (Tk)
- Control signal input: 0-10 VDC Supply: 12 VDC e.g. $\mathrm{CO}_{2}$, pressure and temperature sensor
- BMS enable/disable
- Indicator lights: run/fault
- Enclosure: plastic (R-ABS, UL94-V0, RAL 7035) or sheet steel (RAL 7035)
- Maximum ambient temperature: $50^{\circ} \mathrm{C}$

## Description

The TEDP transformer speed controllers are based on the principle of voltage control with auto-transformers. They are applicable to single phase voltage-controllable motors $(230 \mathrm{~V}, 50 / 60 \mathrm{~Hz})$ to control the rotational speed of fans.

Each of the 5 transformer steps is selected with a 0-10 VDC signal, for example: combine with SDPV10, SDPV230 or other external signal.

TEDP drives are fitted connections for motors with thermostat (Tk) overheat protection.

A safety isolator/switch disconnector should be installed on the mains side of all motor drives; refer to SISO.

## Range

For selection of the correctly current rated drive select the first model with a current rating above the fan full load current (FLC) to be controlled.

Speed controller for single phase voltage controllable motors.

## Mounting

Break (Isolate) mains voltage. The controllers are to be mounted vertically on a smooth surface. Connect voltage supply, motor(s) and earth as shown in the scheme with cables of the proper diameter and in accordance with local regulations.

Wiring (see above diagram)
Connecting the input signal: a separate $0-10 \mathrm{~V}$ signal is provided. In this case only 0 V and $\mathrm{V} / \mathrm{C}$ will be needed, connect negative line to the " 0 V " TB and the + or $0-10 \mathrm{~V}$ to the " $\mathrm{V} / \mathrm{C}$ " TB . The
" +V " TB provides status feedback: Normal operation:12V (max 70 mA ); Over temp fault: 0 V .

If TK is not used: Link TK-TK
A safety isolator/switch disconnector should be installed on the mains side of all motor drives; refer to SISO.

Transport and stock keeping
Avoid shocks and extreme conditions, stock in original packing.
Warranty
Two years from delivery date against defects in manufacturing. Any modifications or alterations to the product relieve the manufacturer of all responsibility. The manufacturer bears no responsibility for any misprints or mistakes in this data, and modifications or improvements to the product can be made at any time after date of publication.

## Maintenance

In normal conditions the controllers are maintenance-free. If soiled clean with dry or damp cloth. In case of heavy pollution clean with a non-aggressive product. In these circumstances the controller should be disconnected from the mains. Pay attention that no fluids enter the
controller. Only reconnect the controller to the mains when it is completely dry.

Motor protection
The controller has connections for motors fitted with thermostat (Tk) overheat protection (NC contacts). Reset: disconnect and reconnect power.

All works may only be carried out by skilled personnel following the local regulations and AFTER the controller is completely separated from the mains. Replace fuse only with same type and rating

## Transformer Speed Controllers \& Drives - Three Phase TDID - Transformer Three Phase

Independent Drive

## Features

- Independent 5 step transformer drive with motor overheat protection via thermostats
- Supply: 400 VAC, $50 / 60 \mathrm{~Hz}, 3$ Phase
- IP54 ingress protection
- In built motor overheat protection via motor thermostats (Tk)
- Switch: 5 positions with offposition
- Indicator light
- 230 VAC unregulated output
- Enclosure: plastic (R-ABS, UL94-V0, RAL 7035) / sheet steel (RAL 7035)
- Maximum ambient temperature: $50{ }^{\circ} \mathrm{C}$

## Description

The TDID transformer speed controllers are based on the principle of voltage control with auto-transformers. They are applicable to three phase voltage-controllable motors ( $400 \mathrm{VAC}, 50 / 60 \mathrm{~Hz}$ ), to control the rotational speed of fans in five steps.

They are fitted out with contacts for motors equipped with thermostat (Tk) overheat protection.

A safety isolator/switch disconnector should be installed on the mains side of all motor drives; refer to SISO.

## Wiring Diagram

R S T - power supply 400 VAC $-50 / 60 \mathrm{~Hz} \mathrm{~N}$ - Neutral L1 - unregulated output 230 VAC (2 A)
U V W - motor connection
TK - input thermal contacts of the motor Pe - earth connections

## Range

For selection of the correctly current rated drive select the first model with a current rating above the fan full load current (FLC) to be controlled.

| Model | TDID2.5A | TDID4A | TDID8A | TDID11A |
| :--- | :---: | :---: | :---: | :---: |

| TDID4A | 300 | 425 | 175 | 255 | 355 | 18.2 | 18.7 | Steel |
| TDID8A | 300 | 425 | 235 | 255 | 355 | 36.4 | 37 | Steel |
| TDID11A | 400 | 430 | 235 | 355 | 355 | 38.4 | 39 | Steel |

## Mounting Instructions

Speed controller for three phase voltage controllable motors.

## Mounting

Break (Isolate) mains voltage. The controllers are to be mounted on a smooth surface. Connect voltage supply, motor(s) and earth as shown in the scheme with cables of the proper diameter.

Wiring (see diagram on previous page)
A safety isolator/switch disconnector should be installed on the mains side of all motor drives; refer to SISO.

Transport and stock keeping
Avoid shocks. Stock in original packing. Avoid extreme conditions.

## Warranty

Two years from delivery date against defects in manufacturing. Any modifications or alterations to the product relieve the manufacturer of all responsibility. The manufacturer bears no responsibility for any misprints or mistakes in this data, and modifications or improvements to the product can be made at any time after date of publication.

Maintenance
In normal conditions the controllers are maintenance-free. If soiled clean with dry or damp cloth. In case of heavy pollution clean with a non-aggressive product. In these circumstances
the controller should be disconnected from the mains. Pay attention that no fluids enter the controller. Only reconnect the controller to the mains when it is completely dry.

Motor protection
The controller has contacts for motors with thermostat (Tk) overheat protection (NC-contact). When motor overheating (or a power failure) is detected the controller stops power to the motor. The red indicator light and alarm output will signal this error condition. (Reset: main switch to off position and back).

All works may only be carried out by skilled personnel following the local regulations and AFTER the controller is completely separated from the mains.

## TDDS - Transformer Three Phase

 Demand Switched Drive

## Features

- Switched 5 step transformer controller with motor thermostat (Tk) overheat protection
- Supply: 400 VAC, $50 / 60 \mathrm{~Hz}, 3$ Phase
- IP54 ingress protection
- In built motor overheat protection via motor thermostats (Tk)
- Switch: 5 positions with offposition
- BMS enable/disable and fault
- Run/Stop contacts (CC - normally closed, OC - normally open) for remote control
- Enclosure: sheet steel (RAL 7035, polyester powder coating)
- Maximum ambient temperature: $50^{\circ} \mathrm{C}$

## Description

The TDDS transformer speed controllers are based on the principle of voltage control with autotransformers. They are applicable to three phase voltage-controllable motors ( $400 \mathrm{VAC}, 50 / 60 \mathrm{~Hz}$ ), to control the rotational speed of fans in five steps.

They are fitted with contacts for motors with thermostat (Tk) overheat protection and run/stop contacts (CC-closed/OC-open) for external or remote starting and stopping via PIR, thermostats, BMS enable/disable etc.

A safety isolator/switch disconnector should be installed on the mains side of the drive; refer to SISO.

## Wiring Diagrams

R S T - power supply 400 VAC $-50 / 60 \mathrm{~Hz}$

## TDDSD - Transformer Three Phase <br> Demand Switched Dual Speed Drive

## Features

- Dual switched 5 step transformer control with motor thermostat (Tk) protection
- Supply: $400 \mathrm{VAC}, 50 / 60 \mathrm{~Hz}, 3$ Phase
- IP 54 ingress protection
- In built motor overheat protection via motor thermostats. Can be used for BMS fault.
- BMS enable/disable (BMS fault via Tk) Run/Stop contacts (CC, OC)
- Enclosure: sheet steel (RAL 7035, polyester powder coating)
- Maximum ambient temperature: $50^{\circ} \mathrm{C}$

## Description

The TDDSD transformer speed controllers are based on the principle of voltage control with auto-transformers. They are applicable to three phase voltage-controllable motors ( $400 \mathrm{~V}, 50 / 60 \mathrm{~Hz}$ ) to control the rotational speed of fans.

This controller makes it possible to select two optimal motor speeds and to switch these by a contact. Important energy savings and an increase of comfort can be realised. e.g. thermostat, PIR control.

They are fitted with connections for motor thermostat (Tk) overheat protection and run/stop contacts (CC-closed/OC-open) for external or remote starting e.g. PIR, thermostat, BMS enable/disable.

## Wiring Diagrams

## TDDSD2.5A

R S T - power supply $400 \mathrm{VAC}, 50 / 60 \mathrm{~Hz}$
N - Neutral
L1 - unregulated output 230 VAC (max 2 A)
U V W - motor connection
CL - contact normally closed (external clock - high/low switching)
TK - input thermal contacts of the motor
CC - contact normally closed
OC - contact normally open
$\mathrm{N}-\mathrm{AL}$ - alarm output ( $230 \mathrm{VAC} / 1 \mathrm{~A}$ )
Pe - earth connections

## Range

For selection of the correctly current rated drive select the first model with a current rating above the fan full load current (FLC) to be controlled.

| Model | TDDSD2.5A | TDDSD4A | TDDSD8A | TDDSD11A |

| Lmax (A) | 2.5 | 4 | 8 | 11 |
| IP Rate | IP54 | IP54 | IP54 | IP54 |

## Dimensions \& Weights

All works may only be carried out by skilled personnel following the local regulations and AFTER the controller is completely separated from the mains.

## Mounting Instructions

Speed controller for three phase voltage controllable motors.

## Mounting

Break (Isolate) mains voltage. The controllers are to be mounted on a smooth surface. Connect voltage supply, motor(s) and earth as shown in the scheme with cables of the proper diameter.

Wiring (see diagram on previous page)
A safety isolator/switch disconnector should be installed on the mains side of all motor drives; refer to SISO.

Transport and stock keeping
Avoid shocks. Stock in original packing. Avoid extreme conditions.

[^1]
# TDDP - Transformer Three Phase Demand Proportional Drive 

## Features

- Proportional 5 step transformer control with motor thermostat (Tk) overheat protection
- Supply: $400 \mathrm{VAC}, 50 / 60 \mathrm{~Hz}, 3$ Phase
- IP54 ingress protection
- In built motor overheat protection via motor thermostats (Tk)
- Control signal input: 0-10 VDC Supply: 12 VDC e.g. $\mathrm{CO}_{2}$, pressure and temperature sensor
- Supply: 12 VDC output
- BMS enable/disable
- Indicator lights: run/fault
- Enclosure: sheet steel (RAL 7035, polyester powder coating)
- Maximum ambient temperature: $50^{\circ} \mathrm{C}$

## Description

The TDDP transformer speed controllers are based on the principle of voltage control with auto-transformers. They are applicable to three phase voltage-controllable motors ( $400 \mathrm{~V}, 50 / 60 \mathrm{~Hz}$ ) to control the rotational speed of fans.

By combining the transformer outputs, contactors and a relay board, it is possible to select these predetermined speeds with a $0-10$ VDC signal, for example: combine with SDPV10, SDPV230 or other external signal.

They are fitted with thermostat ( Tk ) contacts for motor protection and BMS enable/disable facilities.

A safety isolator/switch disconnector should be installed on the mains side of all motor drives; refer to SISO.

## Wiring Diagram

Speed goes up at: $2,4,6,8,9.5$ VDC
Speed goes down at: 1.8, 3.8, 5.8, 7.8, 9.3 VDC

## Mounting Instructions

Speed controller for three phase voltage controllable motors.
Wiring (Refer to diagram above)
When TK-TK not used: Connect TK-TK
A safety isolator/switch disconnector should be installed on the mains side of all motor drives; refer to SISO.

## Mounting

Break (Isolate) mains voltage. The controllers are to be mounted vertically on a smooth surface. Connect voltage supply, motor(s) and earth as shown in the scheme with cables of the proper diameter and in accordance with local regulations.

Transport and stock keeping
Avoid shocks and extreme conditions, stock in original packing.
Warranty
Two years from delivery date against defects in manufacturing. Any modifications or alterations to the product relieve the manufacturer of all responsibility. The manufacturer bears no responsibility for any misprints or mistakes in this data, and modifications or improvements to the product can be made at any time after date of publication.

## Maintenance

In normal conditions the controllers are maintenance-free. If soiled clean with dry or damp cloth. In case of heavy pollution clean with a non-aggressive product. In these circumstances
the controller should be disconnected from the mains. Pay attention that no fluids enter the controller. Only reconnect the controller to the mains when it is completely dry.

Motor protection
In built motor overheat protection via motor thermostats (Tk). When these contacts open because of motor overheating, this circuit is broken and the controller stops power to the motor. There is NO
automatic restart for safety reasons. After elimination of the cause of the overheating, restart by putting the switch in Off-position for a few moments.

All works may only be carried out by skilled personnel following the local regulations and AFTER the controller is completely separated from the mains.

## Features

- $400 \mathrm{~V}, 1.2-15.5 \mathrm{~A}, 0.37-7.5 \mathrm{~kW} 3 \mathrm{Ph}$
- Enclosure IP20
- Max shielded cable length 25 m
- Asynch motor control
- Simple installation wizard
- Ultra compact
- Alpha-numeric display
- Included potentiometer for manual speed adjustment \& thermistor overheat protection
- Built in RFI allowing for 15 m of screen cable
- Built-in brake functions with built in DC and AC brake functions
- $\quad 2 x A I, 1 x A O \& 1 x R O / R S 485$. Connectable as Modbus RTU
- BMS enable/disable
- Maximum ambient $50^{\circ} \mathrm{C}$

Description
IDDXB20 is a three phase frequency converter with unsurpassed reliability, user-friendliness, condensed functionality, and extremely easy to commission. Terminal numbers are named in the same manner as in the rest of the family.

IDDXB20 can be set up to perform perfectly even in complex application set-ups. It is specifically configured for installation close to tube and box fans.

Independent drive, from the front potentiometer, switched and proportional demand control are included as standard.

A safety isolator/switch disconnector should be installed on the mains side of all motor drives; refer to SISO.

## Features

- $400 \mathrm{~V}, 1.2-90 \mathrm{~A}, 0.37-90 \mathrm{~W} 3 \mathrm{Ph}$
- Designed for HVAC applications i.e. Fire mode, Flying Start..
- Enclosures IP20 (see IDDXF54 for IP54 and IDDXF66 for IP66)
- Asynch \& PM motor control. Max shielded cable length 25 m
- Simple installation wizard, Alphanumeric display
- Alpha-numeric display
- In built motor overheat protection via motor thermistors
- EMC A1/C2 integrated filters \& DC choke for harmonic mitigation
- $4 x D I, 2 x A I, 1 x A O / D O \& 2 x R O /$ RS485 BMS enable/disable Modbus RTU, N2, FLN \& BACnet
- Maximum ambient $50^{\circ} \mathrm{C}$

Description
Designed specifically for fan applications the three phase IDDXF Frequency converters control speed, torque, and the overall performance of AC \& PM motors by controlling the power input

Independent, Switched and Proportional demand control from the included digital, and HVAC protocols ensures maximum efficiency and comfort to the level required.

A safety isolator/switch disconnector should be installed on the mains side of all motor drives; refer to SISO.

## Range

For selection of the correctly current rated drive select the first model with a current rating above the fan full load current (FLC) to be controlled.

## Features

- $400 \mathrm{~V}, 2.2-177 \mathrm{~A}, 0.75-90 \mathrm{~kW} 3 \mathrm{Ph}$
- Designed for HVAC applications i.e. Fire mode, Flying Start..
- Enclosures IP54 (see IDDXF20 for IP20 and IDDXF66 for IP66)
- Asynch \& PM motor control. Max shielded cable length 25 m
- Simple installation wizard. Alphanumeric display
- In built motor overheat protection via motor thermistors
- EMC A1/C2 integrated filters \& DC choke for harmonic mitigation
- $4 x D I, 2 x A I, 1 x A O / D O \& 2 x R O /$ RS485. Modbus RTU, N2, FLN \& BACnet
- Maximum ambient $50^{\circ} \mathrm{C}$

Description
Designed specifically for three phase fan applications the IDDXF Frequency converters control speed, torque, and the overall performance of AC \& PM motors by controlling the power input. Independent, Switched and Proportional demand control from the included digital, and HVAC protocols ensures maximum efficiency and comfort to the level required.

A safety isolator/switch disconnector should be installed on the mains side of all motor drives; refer to SISO.

## Features

- $400 \mathrm{~V}, 3.0-106 \mathrm{~A}, 1.1-55 \mathrm{~kW} 3 \mathrm{Ph}$
- Designed for HVAC applications i.e. Fire mode, Flying Start..
- Enclosures IP66 ingress protection
- Max shielded cable length 25 m
- Asynch \& PM motor control
- Simple installation wizard
- Ultra compact
- Alpha-numeric display
- In built motor overheat protection via motor thermistors
- LCP Remote mounting kit with 3m cable available
- Connectable to all major HVAC protocols Modbus RTU, N2, FLN \& BACnet
- EMC A1/C2 integrated filters \& DC choke for harmonic mitigation
- $4 x D I, 2 x A I, 1 x A O / D O \& 2 x R O /$ RS485
- BMS enable/disable
- Fully programmable set points via display \& included software
- Maximum ambient $50^{\circ} \mathrm{C}$
- High energy efficiency

# Inverter Speed Control \& Drives IEDXB2O - Inverter Single to Three Phase IP20 

Demand Independent, Switched and Proportional Drive - For Tube/Box Fans

## Features

- $1 \times 200-240 \mathrm{VAC}$ to $3 \times 200-240 \mathrm{VAC}$, 1.2-9.6A, $0.18-2.2 \mathrm{~kW}$
- Enclosure IP20
- Max shielded cable length 25 m
- Asynch motor control
- Simple installation wizard
- Ultra compact
- Alpha-numeric display
- Included fitted potentiometer for manual speed adjustment
- Connectable as Modbus RTU
- Built in RFI
- Built-in brake functions with built in DC and AC brake functions
- $2 x A I, 1 x A O \& 1 x R O / R S 485$
- BMS enable/disable
- Maximum ambient $50^{\circ} \mathrm{C}$
- Coated PCB standard for harsh environments
- High energy efficiency

Description
IEDXB20 is a frequency converter with unsurpassed reliability, user-friendliness, condensed functionality, and extremely easy to commission. Terminal numbers are named in the same manner as in the rest of the family.

It converts single phase 200-240VAC input to three phase output for areas limited by power supply availability and efficiency requirements.

Independent drive, from the front potentiometer, switched and proportional demand control are included as standard.

A safety isolator/switch disconnector should be installed on the mains side of the drive; refer to SISO.

Ensure motor is suitable for 200-240VAC 3 phase operation.

## Range

## SISO－Safety Isolators／Switch－Disconnectors

## Features

－Electrical range $230 \mathrm{~V}-690 \mathrm{~V}$ $1-3$ phase， $50-60 \mathrm{~Hz}, 0-63 \mathrm{~A}$
－Enclosure IP66 Grey RAL 7035
－Mechanically interlocked with 3xPadlock to＇Off＇apertures
－Early breaker fitted to all units as standard．Three and Six pole／wire versions available
－Three and Six pole／wire versions available
－Two entries top and bottom 20／25A M20 40／63A M20／25
－Stainless steel facia screws
－Two earth continuity screws in each enclosure

## Description

All fans and drives should have a correctly rated lockable isolation switch installed in the power input circuit to provide full electrical isolation．This is vital for safe installation，operation and maintenance．

Many modern drives also require an early break signal so that a graceful full power off can be achieved without damage to sensitive electronics．Early break is included in all SISO Isolators．Isolators are provided with mechanically interlocked IP66 as standard．

## Mounting Instructions

This product shall be installed, commissioned and maintained by or under the supervision of a competent electrician in accordance with current electrical engineering Codes of practice and regional laws.

It is essential that the power supply is disconnected prior to installation.
To maintain the IP rating to the product it is important to adhere to the following,

- Use only the existing mounting holes
- Use cable glands and sealing washers designed to maintain the rating
- Tighten lid screws to 1.2 Nm

The unit designed to be mounted vertically.
Ensure that the correct cross section of cable and terminators are used as the table above.

All works may only be carried out by skilled personnel following the local regulations, reference to the installation guide and AFTER the controller is completely separated from the mains.

## SDXT - Room Temperature Sensor/Switch Controller <br> for Demand Proportional \& Switched Drives

## Features

- Supply voltage: 18 - 32 VDC $\pm 10$ $\% / 15-24 \mathrm{Vac} \pm 10 \%$
- Low profile housing with covered screws
- Terminal blocks with 0.75 mm 2 connectors
- Measurement range $-0+40^{\circ} \mathrm{C}$
- Accuracy: $\pm 0,5^{\circ} \mathrm{C}$
- Short reaction times: less than 2 sec. in air
- LED operating indication
- Enclosure: plastic ABS, V0, RAL9010 ivory
- Protection class: IP30
- Power consumption: up to 60 mA
- Sensor element: platinum temperature sensor PT500
- Analogue output 0-10 Vdc/0-20 mA
- Digital relay output
- Modbus RTU on board
- Downloadable set-up software

## Description

These room temperature sensors provide precision sensing, compatible with all leading control systems. They are designed to provide fast response to changes in thermal comfort conditions. Each unit is equipped with a platinum sensor and has a $0-10 \mathrm{Vdc} / 0-20 \mathrm{~mA}$ analogue output and relay digital signal.

They include on board Modbus RTU and although pre-set for normal operations can be site set via downloadable software.

## Mounting Instructions

Technical data
Supply voltage: $18-32 \mathrm{VDC} \pm 10 \% / 15-24 \mathrm{VAC} \pm 10 \%$
Operating temperature range: $-10 \ldots 50^{\circ} \mathrm{C}$
Relay output: 230 VAC/2 A
Enclosure: plastic ABS, V0, RAL9010 ivory,
Ingress Protection: IP30
Wiring (see previous page)
Mounting
The device is to be mounted in a room on a smooth surface, preferably at a minimum height of 1.50 m above the floor.

Transport and stock keeping
Avoid shocks. Stock in original packing. Avoid extreme conditions.

## Warranty

Two years from delivery date against defects in manufacturing. Any modifications or alterations to the product relieve the manufacturer of all responsibility. The manufacturer bears no responsibility for any misprints or mistakes in this data, and modifications or improvements to the product can be made at any time after date of publication.

Maintenance
In normal conditions the controllers are maintenance-free. If soiled clean with dry or damp cloth. In case of heavy pollution clean with a non-aggressive product. In these circumstances
the controller should be disconnected from the mains. Pay attention that no fluids enter the controller. Only reconnect the controller to the mains when it is completely dry.

All works may only be carried out by skilled personnel following the local regulations, reference to the installation guide and AFTER the controller is completely separated from the mains.

## SDXC - Room CO Sensor/Switch Controller <br> for Demand Proportional \& Switched Drives

## Features

- Supply voltage: $15-24 \mathrm{VAC}$ or 18 34VDC
- Microcontroller based design increases accuracy and reduces installation time
- Modbus RTU (RS485)
- Software for configuration
- IP30 Ingress protection
- LED operation indication
- Excellent long term stability with NDIR CO ${ }_{2}$ sensor
- Innovative self-calibrating algorithm
- Sensor and switch combined
- C/O relay output
- Analogue output: 0-10 VDC/0-20 mA
- Different $\mathrm{CO}_{2}$ ranges selectable by jumper or via Modbus
- Setpoint selectable by trimmer
- Operating conditions: -10 to $50^{\circ} \mathrm{C}$ and 0-95 \% RH

## Description

These $\mathrm{CO}_{2}$ sensor/switches provide a stable, secure environment with high energy performance.

The concentration of $\mathrm{CO}_{2}$ in the air is measured (with four predefined ranges or a user-definable range), using a self-calibrated and maintenance-free sensor with NDIR technology.

The SDXC is fully configurable via Modbus RTU RS485 communications and is compatible with most building management systems. Although pre-set, software is made freely available for after sales configuration.

## Range

| Model | Description | Part |

## Mounting Instructions

Technical data
Supply voltage: $18-32$ VDC $\pm 10 \% / 15-24$ VAC $\pm 10 \%$
Power consumption normal: up to 75 mA , peak: 400 mA for 10 ms per 3
sec period
Accuracy: $\pm 50 \mathrm{ppm}$
Operating temperature range: $-10 \ldots 50^{\circ} \mathrm{C}$
Relay output: 230 VAC/2 A
Enclosure: plastic ABS, V0, RAL9010 ivory,
Ingress Protection: IP30
The $\mathrm{CO}_{2}$ room sensor/switch measures the concentration of $\mathrm{CO}_{2}$ from 450 to 1850 ppm in air using a NDIR sensor which is self-calibrating and maintenance-free in a normal environment.

Wiring (see diagram on previous page)
Mounting
The device is to be mounted in a room on a smooth surface, preferably at a minimum height of 1.50 m above the floor.

Transport and stock keeping
Avoid shocks. Stock in original packing. Avoid extreme conditions.
Warranty
Two years from delivery date against defects in manufacturing. Any modifications or alterations to the product relieve the manufacturer of all responsibility. The manufacturer bears no responsibility for any misprints or mistakes in this data, and modifications or improvements to the product can be made at any time after date of publication.

Maintenance
In normal conditions the controllers are maintenance-free. If soiled clean with dry or damp cloth. In case of heavy pollution clean with a non-aggressive product. In these circumstances
the controller should be disconnected from the mains. Pay attention that no fluids enter the controller. Only reconnect the controller to the mains when it is completely dry.

General danger

Electrical hazard

All works may only be carried out by skilled personnel following the local regulations, reference to the installation guide and AFTER the controller is completely separated from the mains.

## SDSI - Room Passive Infrared Switch for Demand Switched Drives (PIR)

## Features

- Input voltage: 25VDC
- Relay Output: OC 250V 2A
- Nominal Max Range: 15 m
- Flush mounting in standard wall box

## Description

The SDSI passive infrared (PIR) switch is ideal for mounting in a standard wall backing box. Three adjustment pots allow for delay, sensitivity and range to be adjusted ensuring that the controlling relay only closes when the room or space is occupied.

## Range

| Model | Description | Part |

the controller should be disconnected from the mains. Pay attention that no fluids enter the controller. Only reconnect the controller to the mains when it is completely dry.

All works may only be carried out by skilled personnel following the local regulations, reference to the installation guide and AFTER the controller is completely separated from the mains

## Features

- Max. operating pressure: 10 KPa for all pressure ranges
- Operating temperature: -20 to $85^{\circ} \mathrm{C}$
- Storage temperature -40 to $85^{\circ} \mathrm{C}$
- Contacts rating: 250 VAC, 1.5 A
- IP Protection: 54
- Mechanical life cycles: +10 million operations
- Materials: Diaphragm: Silicone, Case: PA 6.6 an POM

## Description

These adjustable highly sensitive differential pressure switches are used for monitoring over pressure, vacuum and differential pressure of air or other non-combustible, non-aggressive gases.

The switching set-point can be adjusted by means of a calibrated knob.
Possible applications are air filters, fan monitoring, overheat protection for electric elements, controlling air- and fire-protection dampers, monitoring air flows and more.

Range

| Model | Description | Part |
| :---: | :---: | :---: |
| SDSP54-500 | Pressure switch 50-500Pa DP Pa 20 | EAOO2103 |
| SDSP54-1000 | Pressure switch 200-1000Pa DP Pa 100 | EA002104 |

## Wiring Diagram

## Mounting Instructions

Differential pressure switch
Technical data
Range Pa
PSW-500: 50-500
PSW-1000: 200-1000
Max. operating pressure 50 mBar or 5000 Pa
Operating temperature $-20-85^{\circ} \mathrm{C}$
Contacts rating 250 VAC, 1.5 A
Mechanical life cycles +- 10 million operations
IP protection IP 54
Diaphragm Silicone
Case PA 6.6 and POM

These adjustable high sensitive differential pressure switches are used for monitoring overpressure, vacuum and differential pressure of air or other non-combustible, non-aggressive gases. The switching setpoint can be adjusted by means of a calibrated knob. The switching differential $P$ can be adjusted with a screw driver.

Possible applications are:
Air filters and fan monitoring
Overheating protection for electric batteries or electric heating
elements
Controlling air- and fire-protection dampers
Monitoring air flows

Warranty

# SDXP54 - Pressure Sensor Controller 

## Features

- Supply: 15-24 VAC $\pm 10 \% / 18-32$ VDC $\pm 10$ \%
- Modbus RTU on board RS485
- Auto-tune function
- Analogue output: 0-10 V/0-20 mA
- Digital output: PWM (open collector)
- Response time: $0.5,1,2$ or 5 seconds
- Operating temperature: $10-60^{\circ} \mathrm{C}$ (temperature compensated)
- Offset calibration procedure
- Selection of differential pressure or air volume mode/readout via Modbus
- Modbus registers reset function (Factory pre-set values)
- Aluminium pressure connection nozzles
- Usage in clean air and nonaggressive, non-combustible gases
- Long-term stability and accuracy
- Selectable Response time
- IP54 (according to EN 60529)
- Downloadable software and SDPUSB compatible

## Description

The SDXP54 is a multi-range differential pressure transmitter with an analogue/digital output and Modbus RTU communication. This calibrated pressure transmitter has eight switchable measuring ranges and is equipped with a state-of-the-art monolithic silicon pressure sensor designed for a wide range of applications.

The piezo-resistive transducer is temperature and pressure compensated and has a high degree of reliability and accuracy. The transmitter has a pushbutton to activate manual zero point calibration and an adjustable offset. Typical applications are medical technology, ventilation and air conditioning ducts, clean rooms and filter monitoring. The sensor can measure air or other non-aggressive, noncombustible gases.

Ideal for variable air volume constant pressure (VAV) and constant air volume (CAV) systems.

## SDPT54 - Room Temperature Sensor Controller for Demand Proportional Drives

## Features

- Built-in PT1000 temperature sensor
- IP54 ingress protection, ABS colour RAL7035
- Digital readout and step indication with LED's
- 5 user definable setpoints
- Modbus RTU (RS485) \& set up software
- 15-24 VAC $\pm 10 \% / 12-32$ VDC $\pm 10 \%$
- 1 analogue input (0-10 VDC/0-20 mA/PWM) *
- 1 analogue output (0-10 VDC/020 mA ) or 1 digital output (PWM, open collector)
- Temperature range: -30 to $70^{\circ} \mathrm{C}$ *
- Power consumption 15-24 VAC supply: max. 70 mA (no load on AO1) or 12-32 VDC supply: max. 85 mA (no load on AO1)
- Operating temperature: -10 to $50^{\circ} \mathrm{C}$

## Description

The SDPT54 multifunctional controller series provides a temperature and/or an analogue input ( $0-10 \mathrm{VDC} / 0-20 \mathrm{~mA} / \mathrm{PWM}$ ) and a userdefined analogue output (0-10 VDC/0-20 $\mathrm{mA} / \mathrm{PWM}$ ) in five steps.

IP 54 rating makes this sensor ideal for use in small industrial or heavy commercial applications.

This controller is equipped with digital readout and step-indication with LED's enabling simple touch pad setup.

Combined with freely downloadable set up software and the SDPUSB connector; advanced programmable inputs and outputs make these controllers suitable for use in most HVAC applications.

## Mounting Instructions

Technical data
Supply voltage: $15-24 \mathrm{VAC} \pm 10 \% / 12-32 \mathrm{VDC} \pm 10 \%$
Operating temperature range: -10 to $50^{\circ} \mathrm{C}$
Enclosure: plastic ABS, RAL7035
Ingress Protection: IP5430
Wiring (see previous page diagram)

## Mounting

The device is to be mounted in a room on a smooth surface, preferably at a minimum height of 1.50 m above the floor.

Transport and stock keeping
Avoid shocks. Stock in original packing. Avoid extreme conditions.

## Warranty

Two years from delivery date against defects in manufacturing. Any modifications or alterations to the product relieve the manufacturer of all responsibility. The manufacturer bears no responsibility for any misprints or mistakes in this data, and modifications or improvements to the product can be made at any time after date of publication.

## Maintenance

In normal conditions the controllers are maintenance-free. If soiled clean with dry or damp cloth. In case of heavy pollution clean with a non-aggressive product. In these circumstances
the controller should be disconnected from the mains. Pay attention that no fluids enter the controller. Only reconnect the controller to the mains when it is completely dry.

General danger

Electrical hazard

All works may only be carried out by skilled personnel following the local regulations, reference to the installation guide and AFTER the controller is completely separated from the mains.

## SDPUSB - USB to Modbus RTU RS485 Connector

## Features

- Easy plug \& play installation. Downloadable software
- LED indication for receiving and transmitting signals
- Compatible with USB 1.1 and 2.0
- Installs as a standard Windows COM port
- USB port powered (Type A connector)
- Modbus RTU RS485 A, /B and GND connections

## Description

The SDPUSB is a self-powered USB to Modbus RTU (RS485) module. The Modbus RTU serial information is automatically converted to serial information on a USB virtual COM port for both transmitted and received communication.

Range

| Model | Description | Part |
| :---: | :---: | :---: |
| SDPUSB | USB to Modbus RTU 485 Connector | EAOO2120 |

## Wiring Diagram

A - RS485 signal A
/B - RS485 signal /B
GND - ground
Parity - none, even and odd
Data bits -7 \& 8
Flow control - none

## Drawing and Dimensions

|  | A | B | C | weight |
| :---: | :---: | :---: | :---: | :---: |
| SDPUSB | 23 | 71 | 8,7 | 12 g |

## Mounting Instructions

Connect only to USB ports (Type A connector) and RS485 A /B GND
terminals.

COM port number can be changed to any available number, to support HyperTerminal or any
other serial communications software application running in Windows Microsoft Windows® WHQL-certified, Mac OS X, Linux and Windows CE device drivers.

FIFO: 128 byte transmit buffer, 256 byte receive buffer
ESD protection for RS485 in \& outputs : $\pm 15 \mathrm{kV}$ Human Body Model
(HBM) and $\pm 15 \mathrm{kV}$
EN61000-4-2 Air Gap Discharge, $\pm 8$ kV EN61000-4-2 Contact Discharge
Parity: none, even, odd
Data bits: 7, 8
Flow control: none

Technical data
Operating temperature: $-10+50^{\circ} \mathrm{C}$

Wiring (see diagram on previous page)
The cable connecting the device control should not exceed 4 m .
Transport and stock keeping
Avoid shocks and extreme conditions, stock in original packing.
Warranty
Two years from delivery date against defects in manufacturing. Any modifications or alterations to the product relieve the manufacturer of all responsibility. The manufacturer bears no responsibility for any misprints or mistakes in this data, and modifications or improvements to the product can be made at any time after date of publication.

Maintenance

Electrical hazard

All works may only be carried out by skilled personnel following the local regulations, reference to the installation guide and AFTER the controller is completely separated from the mains

# Potentiometers \& Power Supply SDPV-10 Room Potentiometer 

## Features

- Minimum (Vmin) and maximum (Vmax) output setting by internal trimmer
- IP rating flush mounting: IP44, surface mounting: IP54
- Enclosure external: plastic ASA, RAL 9010 white-ivory
- Enclosure internal: polyamide according to IEC 60335
- Operating temperature: $0 . . .40^{\circ} \mathrm{C}$
- Supply (Vin) 3-15 VDC
- Vmin 10-70 \% Vin
- Vmax 30-100 \% Vin
- Load $\geq 2 \mathrm{k} \Omega$
- Consumption $\leq 10 \mathrm{~mA}$ incl. load
- Off-position

## Description

These potentiometers are designed to control fans equipped with an EC motor or in any application were a DC control signal of $0-10 \mathrm{VDC}$ is required; such as demand proportional drives.
It is mounted in a splash water proof design enclosure and can be used for inset as well as for surface mounting. There

The SDPV-10 is supplied with customer adjustable min and max settings pre-set from the factory for Vmin $20 \%$ and Vmax $100 \%$.

A supply voltage between 3 and 15 VDC is required to provide an infinitely variable output signal between two internally selectable positions: Vmin and Vmax. The load may not be lower than 2 kOhm ( $\mathrm{RL} \geq 2 \mathrm{kOhm}$ ).

## Wiring Diagram

Range

| Model | Description | Part |
| :---: | :---: | :---: |
| SDPV-10 | Potentiometer Out:10VDC | EA002107 |

## Drawings and Dimensions

## Mounting Instructions

Technical data
Supply (Vin) 3-15 VDC
Vmin 10-70 \% Vin Vmax 30-100 \% Vin
Load $\geq 2 \mathrm{k} \Omega$
Consumption $\leq 10 \mathrm{~mA}$ incl. load
Off-position
Enclosure external: plastic ASA, RAL 9010 white-ivory
Enclosure internal: polyamide according to IEC 60335
Operating temperature: $0 \ldots 40^{\circ} \mathrm{C}$
This potentiometer is developed to control fans equipped with an EC motor or other demand proportional drive requiring 0-10VDC input. It is mounted in a splash water proof housing and can be used for inset as well as for surface mounting. The potentiometer requires a supply between 3 VDC and 15 VDC , and it provides a stepless output signal between voltage Vmin and voltage Vmax. Vmin and Vmax are internally selectable. Position 0 is the off-position. The load cannot be lower than $2 \mathrm{k} \Omega(\mathrm{RL} \geq 2 \mathrm{k} \Omega)$.

Inset mounting (IP 44)
Connect according to the diagram. Mount the inner case to the wall with the connections pointing down. Mount cover with nut to the wall. Push knob in place at off position.

Surface mounting (IP 54)
Mount the case to the wall together with included grommets. Connect according to the diagram. Mount inner case in surface mounting case with included screws. Mount cover with nut to surface mounting case. Push knob in place at off position. When needed a 5 mm hole for condensation water is to be drilled at the bottom of the surface mounting case.

Wiring (see diagram on previous page)
The cable connecting the device control should not exceed 4 m . For a cable length between 4 and 12 m we recommend using a shielded cable. For cable longer than 12 m use the SDPV-230 device.

Transport and stock keeping
Avoid shocks and extreme conditions, stock in original packing.

## Warranty

Two years from delivery date against defects in manufacturing. Any modifications or alterations to the product relieve the manufacturer of all responsibility. The manufacturer bears no responsibility for any misprints or mistakes in this data, and modifications or improvements to the product can be made at any time after date of publication.

## Maintenance

In normal conditions the controllers are maintenance-free. If soiled clean with dry or damp cloth. In case of heavy pollution clean with a non-aggressive product. In these circumstances
the controller should be disconnected from the mains. Pay attention that no fluids enter the controller. Only reconnect the controller to the mains when it is completely dry.

All works may only be carried out by skilled personnel following the local regulations, reference to the installation guide and AFTER the controller is completely separated from the mains.

# Potentiometers \& Power Supply SDPV-230 - Room Potentiometer 

## Features

- Voltage supply: 230 VAC, $50 / 60 \mathrm{~Hz}$
- Selectable output: $0-10 \mathrm{~V}, 0-20 \mathrm{~mA}$ \& PWM
- Load: $0-10 \mathrm{~V}$ and $\mathrm{PWM}>2 \mathrm{k} \Omega$ / $0-20 \mathrm{~mA}<500 \Omega$
- Minimum (Vmin) and maximum (Vmax) output setting by internal trimmer
- IP rating flush mounting: IP44, surface mounting: IP54
- Enclosure external: plastic ASA, RAL 9010 white-ivory
- Enclosure internal: polyamide according to IEC 60335
- Operating temperature: $0 . . .40^{\circ} \mathrm{C}$

## Description

This potentiometer is developed to control fans equipped with an EC motor or demand proportional drives without a 10VDC output. It is mounted in a splash water proof housing and can be used for inset as well as for surface mounting.

The potentiometer needs a supply of 230 VAC , and gives a stepless output signal of 0-10 VDC or 0-20 mA and PWM between voltage Vmin and voltage Vmax. Position 0 is the off-position. The load cannot be lower than $2 \mathrm{k} \Omega(\mathrm{RL} \geq 2 \mathrm{k} \Omega)$ in $0-10 \mathrm{~V}$ output mode or higher than 500 if $0-20 \mathrm{~mA}$

| Model | Description | Part |

## SDXV - Power Supply for Sensors \& Switches 230VAC to 24VDC

## Features

- Input voltage: $195-265 \mathrm{Vac}$ at $50 / 60$ Hz
- Short circuit protection
- Over current protection: 120-150 \% of rated current
- Automatic recovery after fault condition is removed
- Voltage tolerance: $\pm 2 \%$
- Load regulation: $\pm 2 \%$
- Cooling type: free air convection
- DIN rail mounting
- Power consumption: without load < 1W
- Available output voltage: 24 VAC
- Internal noise filter
- IP30 protection
- Working temperature: $0 . . .70^{\circ} \mathrm{C}$

## Description

A low cost DIN rail mountable switching power supplies designed especially for use with sensors \& controls. Converting 230VAC to 24VAC 4A for safety in control circuits.

The SDVX power supply (PSU) offers a reliable power source, is short circuit protected with high efficiency and low ripple and is suitable for use with sensors, electromechanical relays, contactors, solid state relays, timers, thermal regulators, PLC's, controllers, DC motors, solenoids, displays and other types of custom electronics.

## Range

## Mounting Instructions <br> Wiring (see diagram)

Transport and stock keeping
Avoid shocks and extreme conditions, stock in original packing.

## Warranty

Two years from delivery date against defects in manufacturing. Any modifications or alterations to the product relieve the manufacturer of all responsibility. The manufacturer bears no
responsibility for any misprints or mistakes in this data, and modifications or improvements to the product can be made at any time after date of publication.

## Maintenance

In normal conditions the controllers are maintenance-free. If soiled clean with dry or damp cloth. In case of heavy pollution clean with a non-aggressive product. In these circumstances
the power supply and attached equipment should be disconnected from the mains. Pay attention that no fluids enter the power supply. Only reconnect the controller to the mains when it is completely dry.

All works may only be carried out by skilled personnel following the local regulations, reference to the installation guide and AFTER the controller is completely separated from the mains.

[^0]:    Warranty
    Two years from delivery date against defects in manufacturing. Any modifications or alterations to the product relieve the manufacturer of all responsibility. The manufacturer bears no responsibility for any misprints or mistakes in this data, and modifications or improvements to the product can be made at any time after date of publication.

    Maintenance
    In normal conditions the controllers are maintenance-free. If soiled clean with dry or damp cloth. In case of heavy pollution clean with a non-aggressive product. In these circumstances
    the controller should be disconnected from the mains. Pay attention that no fluids enter the controller. Only reconnect the controller to the mains when it is completely dry.

    Motor protection
    The controller has contacts for motors with thermostat (Tk) overheat protection (NC-contact). When motor overheating (or a power failure) is detected the controller stops power to the motor. The red indicator light and alarm output will signal this error condition. (Reset: main switch to off position and back).
