CHILLED BEAM CASSETTE IQ STAR LYRA

TECHNICAL CATALOGUE

IQ STAR LYRA CHILLED BEAM CASSETTE

The LYRA chilled beam cassette is a compact chilled beam for ventilation, cooling and heating. It provides comfort with low air velocities in the room by mixing the supply air with the ambient air. LYRA diffuses air in 4 directions. This gives a high cooling effect. It is available with comfort control - FläktGroup adjustable induction-and flow pattern control. These two features give high flexibility.

LYRA is equipped with Coanda Safety Control. This function is necessary if a low air flow setting is used, to guarantee an optimal indoor climate. LYRA can also be supplied with integrated control to offer a plug and play system.

QUICK SELECTION

The diagram shows the approximate cooling power P_{tot} in W with water flow $q_w = 0.05$ l/s, temperature difference between room air and supply air $\Delta t = 8$ °C. Temperature difference between mean water temperature and room temperature, $\Delta t = 8$ °C. Total air pressure drop 70 Pa.

KEY FEATURES

- Ventilation
- Heating and cooling
- Compact chilled beam
- Adjustable induction
- Flow Pattern Control
- Integrated control

SPECIFICATIONS

- Compact chilled beams for installation flush into false ceiling or suspended from soffit
- 2 or 4 pipes coil for cooling or cooling and heating
- Equipped with Comfort Control that provides individually adjustable airflow in four directions enabling for each side asymmetric throw
- Flow pattern control to adjust the diffusion angle in each side
- Available in two lengths, 600 mm and 1200 mm
- Low noise level
- Integrated control for a simple installation

PRODUCT CODE EXAMPLE

Cassette chilled beam IQCB-060-12-1-01-0.

CONSTRUCTION AND FUNCTIONS

CONSTRUCTION

The LYRA chilled beam cassette is designed for installation in false ceilings, and its dimensions fit a 600 mm false ceiling module.

This regards both its length and height, which means that the product must be installed completely flush with the ceiling. If the LYRA chilled beam cassette is equipped with the accessory IQAZ-33, it can be freely suspended from the ceiling.

The LYRA chilled beam cassette is equipped with comfort control and has control equipment as an accessory. This combination provides high flexibility for dimensioning the indoor climate. The air flow can be adjusted with levers (comfort control) by changing the number of open nozzles in the air duct. This is easily done during commissioning. The adjustable nozzles offer a choice of air distribution options (1-way, 2-way, 3-way and 4-way).

This easy adjustment of air distribution and capacity makes it easy to adapt the system to changing conditions. On delivery, the standard beam has the maximum number of nozzles open as default (nozzle 3). The LYRA chilled beam cassette is equipped with Coanda Safety Control (CSC). It can be varied between high effect mode (front in lowest position) and normal effect mode (front in highest position). CSC should be used with low air flows to ensure that the air stream adheres to the ceiling. High effect mode is obtained when the front is in the lowest position. This mode should not be used below 50 Pa.

MATERIAL AND SURFACE FINISH

The casing mainly consists of galvanized steel sheet. The front panel has a white powder-coated finish. Standard colour RAL 9003, equivalent to NCS 0500-N, gloss level 30.

Coil in copper with connector \varnothing y = 15 mm and aluminium fins. Max. working pressure 1.6 MPa.

INSTRUCTIONS

Instructions for installation, adjustment and maintenance are delivered with each product. Instructions can also be accessed via Select.

TECHNICAL DATA AND DIMENSIONS

For full dimension data, use FläktGroup product selection program Select. For further information, contact our nearest sales office. Web address, Select <http://select.flaktwoods.com/>

COMFORT CONTROL

LYRA is available with 5 different air flow settings: low, medium, high, boost and fixed boost.

Air flow in l/s at 70 Pa	60 x 60	60 x 120
Low airflow	4 - 12	8 - 21
Medium airflow	6 - 17	11 - 29
High airflow	8 - 22	14 - 35
Boost airflow, \varnothing 125, with CC	25 - 39	38 - 52
Boost airflow, \varnothing 160, with CC	–	52 - 67
Fixed boost flow, \varnothing 125	39	–
Fixed boost airflow, \varnothing 160	–	61

To achieve optimal air distribution into the room, and full flexibility, tool free air flow adjustment is available for each side. Levers located at each side enables fast and simple air flow adjustment without the need for additional tools.

From shut off position, low, medium and high setting are available with 3 nozzle positions, boost setting with

4 nozzle positions and fixed boost setting fixed to 1 position.

Fixed boost setting requires no nozzle adjustment and offers higher airflows at quieter noise levels.

Tool free nozzle settings for LYRA - low, medium and high airflow.

Tool free nozzle settings for LYRA - boost airflow.

Airflow with different nozzle settings.

FLOW PATTERN CONTROL (FPC), COANDA SAFETY CONTROL (CSC)

FLOW PATTERN CONTROL - FPC

The FPC (Flow Pattern Control) is a function that makes LYRA highly flexible. It is the FPC function combined with comfort control that gives LYRA its unique characteristics. FläktGroup FPC function allows the air flow to be directed at different angles. It is very easy to adjust and change the air flow direction.

The image below shows an installation where air direction is set to 30 ° in two directions and the airflow is set with comfort controls to the same nozzle on each side of a size 120. This installation options provide an efficient and comfortable air throughout the room.

The image below shows an installation where a high airflow is needed. Comfort control is still set to the same nozzle at each side, but the flaps set to 30 ° in the direction of two neighboring beams.

COANDA SAFETY CONTROL (CSC), FREELY SUSPENDED COANDA SAFETY CONTROL (CSC)

Coanda Safety Control (CSC) is a function that maintains the Coanda effect (adhesion of the air to the ceiling) while simultaneously ensuring the highest possible cooling power. This is done by adjusting the position of the front panel.

At low flows and pressures, it may be necessary to adjust the front panel to its highest position to keep the coanda effect.

At high flows and pressure, the Coanda effect is easily maintained, so the front panel can be set in its lowest position, which increases the cooling and heating power by approximately 5-10%.

To adjust the front panel, pull or push it so that it snaps into position.

FREELY SUSPENDED

LYRA can be adapted for freely suspended installation. This is done by ordering the accessory IQAZ-33, which consists of a

SUSPENSION, INSTALLATION

casing and a front plate adapter. This accessory is fitted on the cassette while the cassette is suspended from the ceiling. In the freely suspended version, the air outlet is specially designed to direct the air flow slightly upwards. This reduces the air velocity in the occupied zone and ensures that air from the room mixes with the chilled air before it reaches the occupied zone. Directing the air upwards also creates the Coanda effect without needing to rely on nearby surfaces.

A duct enclosure for concealing water pipes and air ducts to the cassette unit is also available as an accessory with three ranges of size:

- 30 to 50 cm
- 50 to 90 cm
- 90 to 170 cm

SUSPENSION OF THE CHILLED BEAM

INSTALLATION WITH FASTENING BRACKET QFAZ-18

A suspension bracket facilitates the suspension of chilled beams from the ceiling. Two brackets are used for each beam. The brackets can be ordered in advance or along with the chilled beam. The suspension brackets can be fitted directly to the ceiling or onto channel support bars. The chilled beam is simply attached by pressing it against the bracket until it clicks into place.

No tools are needed. After this, the chilled beam can be adjusted lengthwise by sliding the bracket along the beam's fastening points. To adjust it sideways, slide the threaded bars along the grooves in the bracket.

INSTALLATION OF CHILLED BEAM WITH WIRE

QFAZ-23-01-01

The chilled beam cassette can also be suspended with wires. In this case, the beam's height is easily adjusted with a stepless fastening device. This type of installation is suitable for metal or concrete ceilings. Alternately, a wire can simply be wound round a bar in the ceiling. A special concrete fastener for concrete ceilings is included in every kit.

With the lock system it is easy to adjust the height installation of the chilled beam.

INTEGRATED CONTROL

LYRA is available with integrated control by ordering the accessory STRZ-75. The room controller can be positioned in three different locations depending on the desired level of accessibility. Actuators and valves are fixed on LYRA in factory. It is delivered with push-on connections. A very simple operation allows the installer to connect it with no risk of leakage. The valves are factory wired. Lyra integrated control offers Modbus or Bacnet communication as standard.

IN OPTION

- Condensation sensor mounted and wired
- Specific connection unit dedicated to IPSUM

From the room controller, it is possible to make the commissioning, increase and decrease temperature and display main information (see STRA-24 catalogue for detailed information)

ROOM CONTROLLER ON SIDE

The room controller is factory mounted on the short side of LYRA and wired. This configuration uses an external temperature sensor installed below the coil. Temperature and condensation (in option) sensor are factory wired.

ROOM CONTROLLER ON FRONT PLATE

The room controller is factory mounted on the front plate of LYRA and wired. This configuration uses the temperature sensor built into the room controller. Condensation sensor (in option) is factory wired.

The controller has 2 positions to be always flush with the front plate (when coanda safety control function is used).

LOOSE DELIVERED ROOM CONTROLLER

The room controller is loose delivered. This configuration used the temperature sensor built into the room controller. A 5m cable is pre-wired to the room controller. On site, installer needs to connect this cable to the connection unit placed on the side of LYRA. Condensation sensor (in option) is factory wired.

LYRA-120 = Water flow = 0.05 l/s, Pressure drop, Δp_w = 10,0 kPa

TECHNICAL AND SOUND DATA

CONDITIONS FOR COOLING PERFORMANCE TABLES

Total cooling effect of beam, P_{tot} = cooling effect of coil, P_{coil} + cooling effect of supply air, P_{air}

- Air side total pressure drop of 70 Pa.
- Water flow rate of 0.05 l/s per circuit.
- $\Delta t = 8^\circ\text{C}$ between room temperature and mean water temperature.
- $\Delta t = 8^\circ\text{C}$ between room temperature and supply air temperature.

Performance for water flows other than 0.05 l/s can be found in the FläktGroup product selection tool, Select (select.flaktgroup.com).

The cooling power of the supply air is based on the supply air being 10°C cooler than the ambient air.

The indicated power for water are based on the CSC (Coanda Safety Control) function in high capacity setup mode. The effects for other water flows are indicated in FläktGroup's product selection program Select. Contact our nearest sales office for further information.

The tables on this page are based on tests performed according to EN 15116. The method is used to compare different chilled beams under equivalent conditions, and does not permit any difference in temperature between the supply air to the beam's coil and the air 1.1 m above the floor (seated head height).

At low air flows, the CSC function should be set to its highest position (Normal capacity setup) for optimal air flow characteristics.

DEFINITIONS

q_l	Supply airflow, l/s
P_{tot}	Total cooling effect, W
P_{coil}	Cooling effect of the coil, W
$P_{\text{coil heat}}$	Heating effect of the coil, W
Δt	Difference between room air temperature and average water temperature, $^\circ\text{C}$
Δp_w	Pressure drop water, kPa
Δt_w	$(^\circ\text{C}) = P_{\text{batt}} (\text{W}) / 208$
Δt_w	$(\text{US imperial}) - \Delta t_w (^\circ\text{F}) = P_{\text{batt}} (\text{BTU/tim}) / 81177$
L_{A10}	Sound pressure level in a room with 10 m^2 room absorption, dB(A)

SOUND POWER LEVEL

LYRA	Correction K_{oct} dB Octave band, mid-frequency, Hz							
	63	125	250	500	1000	2000	4000	8000
60	4	-6	-2	-1	1	-3	-10	-16
120	4	-3	-3	-1	1	-3	-10	-17
Tol +/-	6	3	2	2	2	2	2	3

The sound power levels for every octave band are obtained by adding together the sound pressure level L_{A10} , dB(A), and the corrections K_{oct} given in the table above, according to the following formula:

$$L_W = L_{A10} + K_{\text{oct}}$$

Correction K_{oct} is the average in the area of application of the chilled beam.

SOUND ATTENUATION

The average sound attenuation ΔL of the LYRA chilled beam cassette from duct to room includes damping the connecting duct's opening when the product is installed on the ceiling.

LYRA II	Sound attenuation in supply duct for the beam ΔL , dB							
	Octave band, mid-frequency, Hz							
	63	125	250	500	1000	2000	4000	8000
60	19	7	6	8	4	10	12	4
120	19	7	6	7	9	11	13	5
Tol +/-	6	3	2	2	2	2	2	3

CORRECTION OF COOLING CAPACITY FOR OTHER WATER FLOW THAN 0.05 l/s**PRESSURE DROP Δp – WATER COOLING**

P_{tot} = cooling power air + coil

P_{coil} = cooling power coil

DIMENSIONS AND WEIGHTS

LYRA-060, RECESSED VERSION

Delivery weight: 16 kg
 Operating weight: 17 kg (incl. cooling water)
 18 kg (incl. cooling and heating water)

↗ = Cooling water in
 ↘ = Cooling water out
 ↗ = Heating water in
 ↘ = Heating water out

LYRA-060 FREELY SUSPENDED

Delivery weight: 18 kg
 Operating weight: 19 kg (incl. cooling water)
 20 kg (incl. cooling and heating water)

↗ = Cooling water in
 ↘ = Cooling water out
 ↗ = Heating water in
 ↘ = Heating water out

LYRA-120, RECESSED VERSION

Delivery weight: 29 kg
 Operating weight: 30 kg (incl. cooling water)
 32 kg (incl. cooling and heating water)

 = Cooling water in
 = Cooling water out
 = Heating water in
 = Heating water out

LYRA-120 FREELY SUSPENDED

Delivery weight: 31 kg
 Operating weight: 33 kg (incl. cooling water)
 34 kg (incl. cooling and heating water)

 = Cooling water in
 = Cooling water out
 = Heating water in
 = Heating water out

LYRA-060, LOW-BUILT

Delivery weight: 14 kg
 Operating weight: 15 kg (incl. cooling water)

= Cooling water in
 = Cooling water out
 = Heating water in
 = Heating water out

LYRA-120 LOW-BUILT

Delivery weight: 25 kg
 Operating weight: 26 kg (incl. cooling water)

= Cooling water in
 = Cooling water out
 = Heating water in
 = Heating water out

PRODUCT CODE AND ACCESSORIES

Cassette chilled beam

IQCB-aaa-bb-c-dd-e

Nominal length (aaa) _____

060 = 60 cm

120 = 120 cm

Connections (bb) _____

12 = Water to the left of air

72 = Low-built

aaa = 060

aaa = 120

14 = Water to the right of air

74 = Low-built

aaa = 060

aaa = 120

16 = 2 spigots (alternative connection)

76 = Low-built

aaa = 060

aaa = 120

Water near air connections

Coil (c) _____

1 = Cooling

2 = Cooling and heating (only bb = 12, 14, 16)

Comfort Control (dd) _____

02 = Low airflow, with CC, Ø125, FPC

04 = Medium airflow, With CC, Ø125, FPC

06 = High airflow, With CC, Ø125, FPC

14 = Fixed boost airflow, Without CC, Ø125, FPC
(only aaa = 060, bb = 12, 14, 16)

16 = Fixed boost airflow, Without CC, Ø160, FPC
(only aaa = 120, bb = 12, 14, 16)

18 = Boost airflow, With CC, Ø125, FPC

20 = Boost airflow, With CC, Ø160, FPC
(only aaa = 120, bb = 12, 14, 16)

Suspension alternatives (e) _____

0 = For installation in false ceiling

1 = For exposed installation (only bb = 12, 14, 16)

ACCESSORIES

Casing freely suspended

(only for bb = 12 in IQCB)

IQAZ-33-bbb-c-ddd

Size (bbb) _____

060 = 60 cm

120 = 120 cm

Execution (c) _____

1 = Cooling, Ø125

2 = Cooling and heating, Ø 125

3 = Cooling, Ø160 (only aaa = 120)

4 = Cooling and heating, Ø160 (only aaa = 120)

Duct enclosure (ddd) _____

000 = without

050 = 30-50 cm

090 = 50-90 cm

170 = 90-170 cm

Gripple (suspension system with wire)

QFAZ-23-01-01

Complete set for one chilled beam cassette

4 wires, 4 concrete fasteners

Fastening bracket

QFAZ-18-7-1

Set of two, for one chilled beam cassette

Suspension rods M8

QFAZ-12

Set of two, length 500 mm.

Two sets QFAZ-12 per cassette

Purging nipple

IQAZ-32-15-0

Integrated control

STRZ-75-bb-cc-d-e

Location Room controller (bb) _____

01 = Loose delivered Room Controller

02 = Room controller mounted on shortside

03 = Room controller in frontplate

Sensors, valves and actuators (cc) _____

01 = Cooling valve

02 = Cooling valve with condensate sensor

03 = Cooling valve and heating valve

04 = Cooling valve, heating valve and condensate sensor

Connection (d) _____

1 = Connection terminal

2 = Connection unit - IPSUM

Chilled beam (e) _____

1 = LYRA 060

2 = LYRA 120

EXCELLENCE IN SOLUTIONS

FläktGroup is the European market leader for smart and energy efficient Indoor Air and Critical Air solutions to support every application area. We offer our customers innovative technologies, high quality and outstanding performance supported by more than a century of accumulated industry experience. The widest product range in the market, and strong market presence in 65 countries worldwide, guarantee that we are always by your side, ready to deliver Excellence in Solutions.

PRODUCT FUNCTIONS BY FLÄKTGROUP

Air Treatment | Air Movement | Air Diffusion | Air Distribution | Air Filtration
Air Management & ATD's | Air Conditioning & Heating | Controls | Service
