# The overall picture will decide

Depending on the model of the fan, the efficiency grade "N" set in accordance with the ErP Directive must be achieved from 2013 and 2015 respectively.

Efficiency grade "N" to ErP-Directive

Year	Centrifugal fans with backward curved blades			Centrifugal fans with forward curved blades	
	without housing static	with housing static	total	with housing static	total
2013	58	58	61	37	42
2015	62	61	64	44	49

The efficiency grade designates a parameter in the calculation of the target energy efficiency of a fan depending on the electric input power when operating at the optimal energy efficiency point. The figure of parameter "N" corresponds to the target energy efficiency with a power of 10 kW.

**To make the selection easier for our customers, we offer complete systems as defined by the ErP Directive!**

In order to compare the systems, the total efficiency  $\eta_e$  of the fan without speed regulation is considered.

$$\eta_e = P_{u(s)} / P_e$$

$\eta_e$  = Total efficiency  
 $P_{u(s)}$  = Fan gas power when operating at the optimal energy efficiency point  
 $P_e$  = Electric input power when operating at the optimal energy efficiency point

If the system has speed regulation, it will be taken into account with the "part load compensation factor"  $C_c$  (see below):

$$\eta_e = P_{u(s)} / P_{e(d)} \cdot C_c$$

$P_{ed}$  = Input power of speed regulator when operating at the optimal energy efficiency point  
 $C_c$  = part load compensation factor

- ▶ without speed regulation:  $C_c = 1$
- ▶ with speed regulation  $P_{ed} \geq 5$  kW:  $C_c = 1.04$
- ▶ with speed regulation  $P_{ed} < 5$  kW:  $C_c = -0.03 \ln(P_{ed}) + 1.088$

In order to take the speed regulation into account via the part load compensation factor  $C_c$ , the following mathematical losses arise in accordance with the formula prescribed by ErP for the following typical motor powers:

- ▶  $P_{ed} = 4.00$  kW:  $C_c = 1.05$  (5 %)
- ▶  $P_{ed} = 2.20$  kW:  $C_c = 1.06$  (6 %)
- ▶  $P_{ed} = 0.75$  kW:  $C_c = 1.10$  (10 %)

## Complete systems by Nicotra Gebhardt

Nicotra Gebhardt can supply complete systems in all product categories which meet the ErP requirements. We offer highly efficient fan systems

- ▶ with matching components and "high efficiency drives" – belt and direct drive.
- ▶ with integrated or external control to regulate speed.
- ▶ with IEC standard motors (IE2) or internal rotor motors with brushless DC technology.
- ▶ and with AC external rotor motors or brushless DC external rotor motors.

## Building blocks for best values

Thanks to the decades-long experience of Nicotra Gebhardt all the components of our fans contribute to their high performance.

Impellers and blades are optimised for turbulence and therefore particularly efficient. An example: With the latest development, the RLM Evo impeller, the free-running centrifugal fans of Nicotra Gebhardt achieve system efficiency grades never reached before.

In addition, the brushless DC drives which Nicotra Gebhardt offers for its direct drive fans improve the system efficiency grades.

**The fan technology of Nicotra Gebhardt delivers highly efficient systems for all applications.**

# proSELECTA II

proSELECTA II is a technical selection program that allows you to configure your own individually designed fan. It provides you with the opportunity to choose from the entire range of fan types and their associated options.

## Simple and reliable selection

The result from proSELECTA II is the provision of all the technical data for your fan, including sound level data, dimension specifications and accessories. Apart from that, as a registered user, your purchase prices are provided. Additionally fully dimensioned drawings in dxf format are available, which can be downloaded and transferred straight into your CAD system.

So that you can be sure. Models and options that are technically not permissible, are automatically excluded in proSELECTA II. So there is no chance that you will configure a "wrong" device option.

You can register as a proSELECTA II user with us, which enables us to offer you faster order processing. What this means for you is:

- ▶ The complete configuration of your fan with its associated system accessories and belt drive layout.
- ▶ The possibility to produce fans that operate via a frequency inverter.
- ▶ The option of saving your own fan configuration on our server.
- ▶ The opportunity to modify your saved configuration, even over the phone to your Nicotra Gebhardt representative.

Technical  
Description

# Powerful centrifugal fans for universal use

## The product ranges TEM

The fan ranges TEM offered by Nicotra Gebhardt do present a large fan programme of single inlet centrifugal fans which are universally usable for many ventilation purposes either in HVAC or in machinery design industry and heavy duty installation business.

The fans are available with forward curved impellers.

The fans are equipped with IEC flanged (B5) standard motors, protection IP55, class F, and they are suitable for frequency inverter controlled operation.

### Benefits:

- ▶ compact design because of direct drive
- ▶ cost effective by maintenance-free operation
- ▶ speed controlled by frequency inverter
- ▶ universally usable due to different options, such as
  - ▶ without brackets as a directly fitted unit for operation with vertical shaft arrangement
  - ▶ with brackets for operation with horizontal shaft
- ▶ ATEX execution for explosion hazardous areas and applications  
Ex II 3G c IIB T3

# The universal technology for various applications

## TEM ranges

- ▶ Sizes from 0160 up to 0355
- ▶ Volume flow up to 9000m<sup>3</sup>/h
- ▶ also available in 60Hz execution
- ▶ also available in ATEX execution 3G
- ▶ motor with PTC in flange execution
- ▶ Impeller with forward curved blades

For applications in HVAC-facilities, big kitchen or for clean room technology.

For every application, the suitable fan:

The given nominal motor current may not be exceeded. If the current consumption is exceeded, the volume is to be throttled correspondingly.  
 For fans of the ATEX execution, the guarantee for operation in explosion endangered areas or for the conveyance of explosive atmosphere expires when the motor nominal current is exceeded! For information on fans of the ATEX execution see Technical Description of this chapter.

Motor protection can take place through motor protection units with bi-metallic releases (EUM 33) or via a thermistor (NTC) temperature sensor in connection with a thermistor (NTC)-release device (EUM 03). See chapter "Accessories".  
 The direction of rotation is determined looking from the drive side. Anti-clockwise rotation, symbol **LG**. Clockwise rotation, symbol **RD**.

**Dimensions** in mm, subject to change.

# TEM 01-0160/-0355

## Specifications

### High performance centrifugal fan TEM 01

single inlet, direct driven.

Lap-jointed scroll housing made from galvanised steel sheet, without pedestal for vertical or horizontal mounting.

Suitable for conveying medium temperatures from -20 °C to +60 °C.

At discharge with integrated flange acc. to DIN 24159-3, at intake with possibility to connect with flange acc. to DIN 24155-2.

Galvanised impeller with forward curved blades. B5 motor mounted outside the airstream.

Impeller balanced in according to DIN ISO 1940, completely maintenance free.

Motor equipped with PTC Thermistors as a standard (except motors in explosion proof execution according to ATEX 94/9/EC).

Three phase 400 V, 50 Hz, single speed.

## Fan data

Fan type	TEM 01	
Volume flow	$q_V$	m <sup>3</sup> /h
Total pressure increase	$p_F$	Pa
Air density at fan inlet	$\rho_1$	kg/m <sup>3</sup>

- ▶ Isolator
- ▶ Motor protection unit

# Powerful centrifugal fans for universal use

## The product ranges REM

The fan ranges REM offered by Nicotra Gebhardt do present a large fan programme of single inlet centrifugal fans which are universally usable for many ventilation purposes either in HVAC or in machinery design industry and heavy duty installation business.

The fans are available with with impellers equipped with backward curved blades. The fans are equipped with IEC flanged (B5) standard motors, protection IP55, class F, and they are suitable for frequency inverter controlled operation.

### Benefits:

- ▶ compact design because of direct drive
- ▶ cost effective by maintenance-free operation
- ▶ speed controlled by frequency inverter
- ▶ universally usable due to different options, such as
- ▶ without brackets as a directly fitted unit for operation with vertical shaft arrangement
- ▶ with brackets for operation with horizontal shaft
- ▶ ATEX execution for explosion hazardous areas and applications  
Ex II 2G c IIB T3

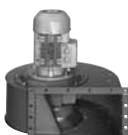

# The universal technology for various applications

## REM ranges

- ▶ Sizes from 0200 up to 0630
- ▶ Volume flow up to 20,000m³/h
- ▶ also in available 60Hz execution
- ▶ also available in ATEX execution 2G
- ▶ motor with PTC in flange execution
- ▶ Impeller with backward curved blades

For applications in the filter technologie, drying- and suction plants.

For every application, the suitable fan:

For "REM ...0630-4D-23" and "...4X-23-2G" only model "13-" available!  
 Motor protection can take place through motor protection units with bi-metallic releases (EUM 33) or via a thermistor (NTC) temperature sensor in connection with a thermistor (NTC)-release device (EUM 03). See chapter "Accessories".

The direction of rotation is determined looking from the drive side.  
 Anti-clockwise rotation, symbol **LG**. Clockwise rotation, symbol **RD**.

**Dimensions** in mm, subject to change.

**Specifications**

**High performance centrifugal fans REM rotavent**

single inlet, direct driven.  
 Lap-jointed scroll housing made from galvanised steel sheet - Range REM11/REM18 **or** welded and coated - Range REM13/REM19.  
 Without pedestal for vertical or horizontal mounting - Range REM11/REM13 **or** with pedestal for horizontal mounting - Range REM18/REM19.  
 Suitable for conveying medium temperatures from -20 °C to +60 °C.  
 At discharge with integrated flange acc. to DIN 24159-3, at intake with possibility to connect with flange acc. to DIN 24155-2.  
 Radial impeller with backward curved aerofoil blades, welded and coated.  
 B5 motor mounted outside the airstream. Impeller balanced in according to DIN ISO 1940, completely maintenance free. Motor equipped with PTC Thermistors as a standard (except motors in explosion proof execution according to ATEX 94/9/ EC).  
 Three phase 400 V, 50 Hz, single speed.

**Fan data**

Fan type	TEM	
Volume flow	$q_V$	m <sup>3</sup> /h
Total pressure increase	$p_F$	Pa
Air density at fan inlet	$\rho_1$	kg/m <sup>3</sup>
Air temperature	t	°C
Speed	N	1/min
Nominal motor power	$P_N$	kW
Voltage	U	V
Frequency	f	Hz
Sound power level (A weighted)	$L_{WA}$	dB
Weight	m	kg

**Fittings / Accessories**

- ▶ Drain plug R1/2"
- ▶ Inspection door
- ▶ Corrosion protection S40
- ▶ Impeller-blades continuously welded
- ▶ Scroll inside continuously welded (REM13/REM19)
- ▶ Scroll inside and outside continuously welded (REM13/REM19)
- ▶ Nuts and bolts from stainless steel
  
- ▶ Inlet flange
- ▶ Inlet flex (with flexible sleeve)
- ▶ Discharge flange
- ▶ Discharge flex (with flexible sleeve)
- ▶ Inlet protection guard
- ▶ Discharge protection guard
- ▶ Anti-vibration mounts (REM18/19)
  
- ▶ Isolator
- ▶ Motor protection unit

# REM 41-0200/-0450 REM 48-0200/-0450

## Specifications

### High performance centrifugal fans REM 40

single inlet with direct drive. Lap-jointed scroll housing made from galvanised steel sheet, without pedestal for vertical or horizontal mounting - Range REM41 **or** with pedestal for horizontal mounting - Range REM48.  
 Suitable for conveying medium temperatures from -20 °C to +60 °C.  
 At discharge with integrated flange acc. to DIN 24159-3, at intake with possibility to connect with flange acc. to DIN 24155-2.  
 Radial impeller with backward curved blades, welded and coated. B5 motor mounted outside the airstream. Impeller statically and dynamically balanced according to DIN ISO 1940, completely maintenance free.  
 Motor equipped with PTC Thermistors as a standard.  
 Three phase 400 V, 50 Hz, single speed.

## Fan data

Fan type	TEM		
Volume flow	$q_V$		m <sup>3</sup> /h
Total pressure increase	$p_F$		Pa
Air density at fan inlet	$\rho_1$		kg/m <sup>3</sup>
Air temperature	t		°C
Speed	N		1/min
Nominal motor power	$P_N$		kW
Voltage	U		V
Frequency	f		Hz
Sound power level (A weighted)	$L_{WA}$		dB
Weight	m		kg

## Fittings / Accessories

- ▶ Drain plug R1/2"
- ▶ Inspection door
  
- ▶ Inlet flange
- ▶ Inlet flex (with flexible sleeve)
- ▶ Discharge flange
- ▶ Discharge flex (with flexible sleeve)
- ▶ Inlet protection guard
- ▶ Anti-vibration mounts (REM48)
  
- ▶ Isolator
- ▶ Motor protection unit

# Accessories

## Accessories

All options and accessories must be specified separately. Please take the technical data and dimensions from the corresponding page of the catalogue.

### Drain Plug

If the fan is installed outside, or if conveying a medium containing humidity, condensation of water may accumulate inside the fan scroll. For extraction of this water a condense water drain has to be installed at the lowest point of the scroll. The drain will be provided with a thread R1/2" for connecting it to a piping. At order please indicate the required casing position.

### Inspection Door

For the purposes of maintenance and cleaning there is an opening, which can be securely closed by means of an access door, in the fan casing. As it can only be opened with a tool, the access door complies with safety and accident prevention regulations. Additional securing with locking bars can be supplied on request. The site and orientation of the inspection opening depends on the casing position. The position should be specified when ordering according to the following diagram: e.g. Access door, Pos. 2.

#### Inspection Door Positions

**Dimensions** in mm, subject to change.

TEM ..-		TEM ..- / REM ..-		REM ..-	
<b>0160/-0180</b>	60 × 210	<b>0200/-0225</b>	60 × 210	<b>0315/-0560</b>	210 × 210
		<b>0250/-0355</b>	110 × 210	<b>0630</b>	310 × 310

### Motor protection hood

Picture may differ from original product.

Motor protection hood, made of galvanised sheet steel, for additional motor protection against weather if the fan is installed outside.

### Corrosion Protection Systems

Nicotra Gebhardt fans are treated with high quality corrosion protection as standard. Under extreme operating conditions, however, additional corrosion protection is advisable.

#### Corrosion protection - Class S40

Degreasing, ironphosphating

► **Powder coating** - Layer thickness  $\geq 40 \mu\text{m}$ , Colour RAL 7039

► **Wet lacquering** - Layer thickness  $\geq 40 \mu\text{m}$  (primer + lacquer finish), Colour RAL 7039

# Accessories

## Continuously welded impeller blades REM 10

Impeller blades can be continuously welded in order to increase the corrosion resistance when conveying a humid or slightly aggressive medium. The continuous welding has no influence on the material resistance or on the max. tip speed.

## Continuously welded scroll REM 10

The casing can be continuously welded in order to increase the corrosion resistance when conveying a humid or slightly aggressive medium. By continuous welding the casing is provided with additional impermeability.

- ▶ **GEH 01** - Casing inside continuously welded
- ▶ **GEH 02** - Casing inside and outside continuously welded

## Stainless steel nuts and bolts REM 10

For applications where there is an increased risk of corrosion, the connecting elements of the fan can be ordered made of stainless steel.

## Protection guards

The fans are designed for installation in equipment and as standard are not equipped with protective guards.

**They should not be put into operation before all protective devices are fitted and connected!**

Protective measures must be carried out as set out in DIN EN ISO 12100 "Safety of machinery - Basic concepts, general principles for design". If the application of the fan allows free access to the inlet and discharge apertures, safety devices must be put in place on the fan in accordance with DIN EN ISO 13857! Suitable safety guards are available as an optional extra.

## Flanges and Flexible Connections

Flanges and flexible connection pieces are available for the inlet and discharge sides.

# Accessories

## Anti Vibration Mounts

Anti Vibration Mounts (AVM) are designed to prevent noise and vibrations being transmitted through the base of the fan. AVMs should be mounted beneath the fan base frame so the weight and spring deflections are evenly distributed.

They should not be mounted symmetrically around the centre of gravity of the system when idle, because a counter force is induced into the system by the pressure created by the working fan.

It is difficult for the manufacturer to establish the position of the AV mounts to suit all types of application.

Vibration and noise insulation can also be improved by ensuring that the fan is connected to its external environment by a flexible coupling.

► **Rubber buffers** - for both vibration and noise insulation at fan speeds above 1400 rpm or 850 rpm

► **Rubber buffers** - for noise insulation only at fan speeds under 800 rpm or 1700 rpm

## Frequency converter

### Design

Frequency inverter with variable output voltage and frequency, specially designed for the operation of centrifugal fans with induction motors. Due to the use of modern power semiconductors it is possible to achieve a speed of revolution with high efficiency. Switching frequencies up to 16 kHz can be set with all types. If the highest switching frequencies are required (for example for reasons of noise reduction), the maximum output current is decreased, in which case the performance category should be specially checked.

**The overall package includes the frequency inverter, filter for class B (for residential and commercial uses) as well as a control unit.**

### General Performance characteristics

Motor protection feature for motors with thermistor temperature sensors, adjustable acceleration and deceleration ramps, minimum and maximum rotation speeds, fixed rotation speeds, trapping switch during operation, programmable inputs and PI-controller (MM420 and MM430 only), RS485 serial interface as well as a detailed operating instructions. Caution about combination with isolators (ESH)! Special EMC-action can be necessary, furthermore do not switch during operation, overvoltages can destroy the switch and the motor-winding.

### Performance range G110 1AC 230V (for single-phase AC supply)

0.25 kW to 2.2 kW rated motor power, 200 V to 240 V 10 % single-phase AC, 47 Hz up to 63 Hz, three-phase current output 3×230 V AC, protection class IP20. Permitted ambient temperature during operation: -10 °C up to +40 °C.

### Performance range MM420 3AC 400V (for three-phase AC supply)

0.55 kW to 11 kW rated motor power, 380 V to 480 V 10 % three-phase AC, 47 Hz up to 63 Hz, three-phase current output 3×400 V AC, protection class IP20. Permitted ambient temperature during operation: -10 °C up to +50 °C. The interference suppression filter required to comply with the EMC basic interference suppression standard EN 50081-1 (residential and commercial uses) is integrated into the package as substructure option. Power choke to comply with EN 61000-3-2 as additional component.

**Observe performance reduction when using high clock frequencies!**

### Performance range MM430 3AC 400V

(for three-phase AC supply)

15 kW to 250 kW rated motor power, 380 V to 480 V 10 % three-phase AC, 47 Hz up to 63 Hz, three-phase current output 3×400 V AC, protection class IP20. Permitted ambient temperature during operation: -10 °C up to +50 °C. The interference suppression filter required to comply with the EMC basic interference suppression standard EN 50081-1 (industrial applications) is partially integrated. In order to attain EMC requirements Class B a frequency inverter without filter should be selected. The appropriate EMC-B filter is then required as an additional component.

**Observe performance reduction when using high clock frequencies!**

The indicated ratings of the units are made for a quick selection. The exact dedication of an inverter in this catalogue is made by taking into account of the max. admitted current at a pulse frequency of 4 kHz. It is important to know that at higher pulse frequencies the supplied current of the inverter will be decreasing, with the possible consequences of having to select a larger inverter unit. Also longer feed lines or additional radio frequency filters may lead to the choice of a larger inverter size.

**The selected frequency inverters (G110 und MM420) are units contains the frequency inverter (as shown in the following tables) with the matching interference suppression filter (Class B) and a control panel. A further component is the line choke which is available as an accessorie.** For more information the available frequency inverters are shown in the following tables.

## Motor protection unit

Motor protection unit EUM 33

Motor protection unit for three-phase current motors (standard motors) without thermal contacts.

### Design

Plastic casing in protection class IP55, permissible ambient temperature +40 °C, 40 Hz up to 60 Hz, frontal operation, for wall mounting. Motor protection unit for single-speed, non-variable speed three-phase current motors without thermal contacts.

### Function

The motor protection units must be adjusted on site to the trigger current. If the preset trigger current is exceeded, the device disconnects the motor from the mains supply via a thermal overload release. Pressing the "on key" causes the unit to turn on again.

All motor protection units EUM33 are also suitable for the protection of EExe-motors (PTB-Prüfung Gesch-Nr. 3.35/386.3060). They must however be mounted outside of explosion endangered areas, since they are not themselves designed with explosion protection.

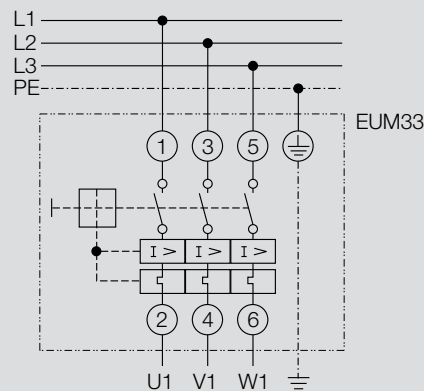

### Dimensions in mm, subject to change.

## Universal control device

Universal control device for installation in control cabinets Digital control module for controlling pressure, air velocity or volume flow (PI controller). For example, a transformer for fans is controlled via the 0...10 V output. The device is designed for installation in control cabinets.

### Type

Multi functional LC-display for actual and nominal values (m/s, hPa = mbar, 100 m<sup>3</sup>/h). Menuassisted adjustment via three function keys.

Actual value input 0...10 V e. g. for:

- ▶ air speed sensors Type EIL in measuring ranges from 0...1 m/s and 0...10 m/s e. g. for:
  - Air velocity control in clean room technology.
- ▶ Pressure sensors Type EIP in measurement ranges 50Pa up to 4000Pa e. g. for:
  - Pressure control in canal systems of air conditioning systems (VVS) or
  - Flow control in centrifugal fans with pressure tapings in the inlet cone. The control module calculates the required flow (m<sup>3</sup>/h) from the differential measured pressure between the surrounding level and inlet cone, maximum volume flow 65536 m<sup>3</sup>/h.
- ▶ Output 0...10 V e. g. for controlling a transformer.
- ▶ Failure message is output via display (internal/external) and relay programmable.
- ▶ External set value specification via potentiometer or 0...10 V signal.
- ▶ Specification of two set values (day/night), can be switched over externally or via keyboard.
- ▶ Protection against unauthorised setting by keyboard code.

### Application area

- ▶ Pressure regulation for centralised ventilation systems and variable volume flow systems for building air conditioning (VVS) e.g. in combination with a frequency inverter or a commutation unit or a transformer and a pressure sensor
- ▶ Volume flow regulation for centrifugal fans (with measuring stub in the inlet cone) e.g. in combination with a frequency inverter or a commutation unit or a transformer or a mini-interface inverter and a pressure sensor and the volume flow volumeter. Maximum volume flow 65536 m<sup>3</sup>/h.
- ▶ Air speed regulation for clean room systems, e.g. in combination with a transformer and an air speed sensor

### Electrical connection and installation

Connection to 230 V, 50/60 Hz. The control module can be installed in a control cabinet door. Admissible relative humidity: 85 %, noncondensing. Power supply for the sensors included:

+24 V, 20 %, I<sub>max</sub> = 70 mA.

#### Setting options

- ▶ Set values in the measurement range of the sensor (m/s, hPa = mbar), or in the volume flow range of the fan (×100 m<sup>3</sup>/h)
- ▶ Switch over of set value (day/night)
- ▶ Min./max. setting range
- ▶ Translation of performance curve (P component)
- ▶ Constant of integration can be selected (I component)
- ▶ Reversal of the effect of the control behaviour
- ▶ Rotation of the performance curve
- ▶ Switchover or programming of internal/external set value
- ▶ Sensor selection via keypad
- ▶ Programming for "Filter fault"
- ▶ Keypad code
- ▶ K factor entry (The K-factor can be found in the current lists of our fan line)

# Accessories

## Differential pressure sensor

Differential pressure sensor with membrane for measuring the pressure, negative pressure or differential pressure of nonaggressive gases.

### Type

The differential pressure to be measured acts transformed into an output signal of 0...10 V by electronics (in SMD technology).

### Application ranges

Volume flow regulators in centrifugal fans (with volume flow measuring device IMV) in connection with a frequency inverter type G110, MM420, MM430, or a universal regulator appliance type ERA 02-4000-5E in connection with a frequency regulator.

### Electrical connection and installation

The differential pressure sensor delivers a starting signal (0...10 V) by pressure increase at the "Plus" connection opposite pressure on the "Minus" connection.

#### Voltage supply

- ▶ 15...30 V DC or 24 V AC, 15 %
- ▶ Pressure connections must point downward, tube connection ø5mm

#### Measuring accuracy

- ▶ Null drift: 0.75 %
- ▶ Sum of linearity and hysteresis: 1 %
- ▶ Temperature drift zero point: 0.3 %/10 K
- ▶ Temperature drift length of measurement: 0.2 %/10 K

### Dimensions in mm, subject to change.

## Isolator ESH 21

Isolator  
ESH 21 (≤3 kW)

Isolator  
ESH 21 (≥5.5 kW)

The isolators are grouped according to motor rated power. All important characteristic data are evident from the model designation. E.g.: **ESH 21-0030-65**  
= 3 kW switch - 6 main contacts - 5 auxiliary contacts

### Design

Beautifully shaped, shock-resistant plastic casing. Protection class IP44/IP65, for sur-face mounting, switching symbols 0 and I. The isolator is fitted with connection terminals that are very accessible and has a con-nection diagram glued in the casing.

The **ESH21 up to 3 kW** is designed to IP44. It is equipped with an integrated locking mechanism.

The **ESH21 up to 5.5 kW** is designed to IP65. It is equipped with a coupling cover and an integrated locking mechanism. A padlock can in some cases be fitted to the rotary switch.

### Function

The isolator disconnects the fan safely from the mains in the event of cleaning, maintenance or repair work on site and thus avoids accidents due to uncontrolled activation of the unit by third parties. It is no main switch or emergency switch.

**All of the classified isolators are fitted with potential-free contacts (1 closer and 1 opener).**

The isolators for motors with a built-in thermal contact have on principle three supplementary auxiliary contacts, so that the pre-switched control device does not drop out during cleaning or servicing work due to motor.

Caution about combination with frequency inverter!

Special EMC-action can be necessary, furthermore do not switch during operation, overvoltages can destroy the switch and the motor-winding.

### Dimensions in mm, subject to change.

ESH 21 ≤3 kW

ESH 21 ≥5.5 kW

## Isolator ESH 22

### Design

Shock-resistant metal casing, black switch with symbols 0 and I. Protection class IP65 or IP54, for surface mounting (see determination in the tabular).

The isolator is fitted with connection terminals that are very accessible and has a connection diagram glued in the casing.

All isolators are equipped with a coupling cover and an integrated locking mechanism. In some cases a padlock can be fitted to the rotary switch.

### Function

The isolator disconnects the fan safely from the mains in the event of cleaning, maintenance or repair work on site and thus avoids accidents due to uncontrolled activation of the unit by third parties. It is no main switch or emergency switch.

**All of the classified isolators are fitted with potential-free contacts (1 closer and 1 opener).**

The isolators for motors with a built-in thermal contact have on principle three supplementary auxiliary contacts, so that the pre-switched control device does not drop out during cleaning or servicing work due to motor.

### Use

The isolator ESH22 with metal casing is necessary, if screened components must be used. (e.g. frequency inverters or control engineering devices are used featuring electronic components).

### Attention!

Do not switch during operation, overvoltages can destroy the switch and the motor winding!

**Dimensions** in mm, subject to change.

# Description

## Safety

The fans are designed for installation in equipment and as standard are not equipped with protective guards.

**They should not be put into operation before all protective devices are fitted and connected!**

Protective measures must be carried out as set out in DIN EN ISO 12100 "Safety of machinery - Basic concepts, general principles for design".

If the application of the fan allows free access to the inlet and discharge apertures, safety devices must be put in place on the fan in accordance with DIN EN ISO 13857! Suitable safety guards are available as an optional extra.

## Performance data

The performance curves of the fans are determined at the plenum test rig according to ISO 5801, measured in installation "B".

In the diagrams of all series, the total pressure increase  $p_F$  and the dynamic pressure in relation to the flange crosssection at the discharge  $p_{d2}$  are represented in dependency on the volume.

For closer determination of duty same unit performance curves (parabolas) are contained in the diagrams.

The static pressure increase  $p_{sF}$  with a connected discharge flange can be determined according to the following relation:

$$p_{sF} = p_F - p_{d2}$$

All data are valid for the source density  $\rho_1 = 1.2 \text{ kg/m}^3$ .

## Sound

The noise measuring and evaluation is conducted according to DIN 45635-38 "Noise measurement in machines: fans".

In the diagrams the A-weighted sound power level of the fan is given on the performance curves as the emission size.

The "A" weighted sound power level are identical for fan intake ( $L_{WA7}$ ) as well as for fan discharge ( $L_{WA4}$ ).

The A-weighted sound pressure level  $L_{pA7/6}$  at a distance of 1 m at fan Inlet or discharge can be approximately determined by the following formula:

$$L_{pA6/7} \sim L_{WA4/7} - 7\text{dB}$$

The sound power levels in the individual octavos can be taken from the electronic catalogue "proSELECTA II".

## Media

The series of centrifugal fans, with single inlet are designed for the use in air handling and ventilation installations.

The fans are suitable for conveying air and other non aggressive gases. The temperatures admitted for the fluid are from  $-20 \text{ }^\circ\text{C}$  to  $+60 \text{ }^\circ\text{C}$ .

## Motors

Standard motors of wellknown brands, type of protection IP55, thermal class F, are used. During commissioning and maintenance the detailed instructions provided by the motor manufacturer (type plate/motor operating instructions) must be followed, this also applies to the motor protection devices required onsite. The motors are equipped with PTC resistors/temperature sensors as standard. Motors with integrated frequency inverters may be supplied on request.

## Electric connection

The centrifugal fans are delivered ready for installation.

The motor terminal box can be accessed easily.

Electric installation must be carried out according to the applicable provisions in compliance with local regulations. A terminal board circuit diagram showing correct connection is enclosed with every motor.

Updated circuit diagrams are also available online at [www.nicotra-gebhardt.com](http://www.nicotra-gebhardt.com).

In case of operation with frequency inverters, always follow the respective operating instructions!

# Description

## Explosion protection according to ATEX

Fans for use in explosive atmospheres must comply with EC Directive 94/9/EG (ATEX 95). Equipment in Group II (all applications except mining) is categorised in accordance with the required degree of safety for designated use in equipment categories 1, 2 and 3. Depending on suitability, a distinction is in addition made between G (gas, vapours) and D (dust).

Harmonised European standards and national guidelines must be observed. Equipment in class 2 and 3 is not subject to compulsory specifications nor to type testing. The manufacturer declares conformity with the EC directive.

### For the standard designs of our fans, the following ignition sources are essentially to be considered:

- ▶ Hot surfaces, e.g. due to heat of friction or seizure of a bearing or due to blockage of an impeller
- ▶ Rubbing-, grinding- or beating sparks, e. g. as a result of contact of the impeller with stationary components
- ▶ Sparks resulting from discharge of electrostatically loaded, non-conducting components, e. g. of plasticpanels, surfaces with strong layer thickness.

### Preconditions for operating:

- ▶ In the proximity of the motor, the temperature limits -20 °C and +40 °C must not be exceeded.
- ▶ The temperature limits of -20 °C und +60 °C for the flow medium must not be exceeded. If the temperature of the flow medium should exceed +60 °C on the pressure side, then the fan must be switched off!
- ▶ The fans may only be employed with a horizontal shaft.
- ▶ The fans are to be protected against the falling-in or sucking-in of foreign objects. Protection guards must be ordered separately as an accessories.
- ▶ On the machine plate the max. permitted fan speed is indicated.
- ▶ Fans for operation in ex-hazardous areas are marked as such on the machine plate and they are accompanied by an EU conformity declaration and with operation and maintenance instructions

*The operation and maintenance instructions have strictly to be observed.*

## Quality management system

### DIN EN ISO 9001

Nicotra Gebhardt quality is the result of a continuous company policy intended to guarantee that our product properties and features are clearly superior to comparable products.

This already established company maxim led in April 1985 to the auditing and certification of the existing quality management system. In the following years it was updated to match the changing international and European standards. Modern production processes, monitored by our quality management system, guarantee a high repeat accuracy in production.

This ongoing high standard of quality permits the establishing of the performance data in classes of accuracy in accordance with DIN 24166.

The narrow tolerances ensure a high level of data reliability for our products.

## Machine Safety

The fans contained in this catalogue are not machines in the sense of the EC Machine Directive. They are delivered with a manufacturer "Declaration of incorporation".

The assessment of the dangers associated with the fan and necessary safety measures are based on the VDMA Unit sheet 24167 : Fans; Safety requirements.

The operating instructions give which safety measures are still necessary on assembly to ensure that the fans comply with the Machine Directive 2006/42/EC.

## Catalogue data

We reserve the right to change any measurements and technical data in this catalogue in accordance with further development of our products. All information valid at the time of printing.
